Parents of Children with Autism Needed for a Research Study

Are you feeling overwhelmed by the demands of parenting your child with autism?

Stanford University researchers are currently recruiting parents of children with autism to participate in a research study of the AMOR Method, a brand new clinical program for parents to reduce stress and enhance parenting practices.

Parents Must:

• Have a child 4-10 years old with a confirmed Autism diagnosis.
• Not currently take psychiatric medications.
• Not have a history of severe medical, psychiatric, or genetic disorders.
• Be willing to complete an 8-week clinical treatment program and additional visits at Stanford University.
