Randall Stafford, MD, PhD
Professor of Medicine

Randall S. Stafford, MD, PhD, is a Professor of Medicine in the Stanford University Prevention Research Center. He has a Master’s degree in health administration (Johns Hopkins University), a PhD in epidemiology (UC Berkeley), an MD (UC San Francisco), and a residency in internal medicine (Massachusetts General Hospital). His research mission is to improve population health outcomes through research that both informs the development and fosters the dissemination of effective, efficient, innovative, and evidence-based prevention interventions. Dr. Stafford’s research has led to more than 170 peer-reviewed articles, including many in high impact journals such as JAMA and the New England Journal of Medicine. He served as a working group member for recent High Blood Pressure guidelines developed by the American Heart Association. Dr. Stafford grew up in Palo Alto and returned to the Bay Area in 2001. He sees patients in the Stanford Internal Medicine Clinic, where he focuses of treating chronic conditions, including high blood pressure, diabetes, chronic pain, and heart disease.
