

Stanford University School of Medicine
Division of Epidemiology
Department of Health Research & Policy

Assistant / Associate / Full Professor

The Stanford University School of Medicine seeks highly qualified candidates for a full-time University Tenure Line or Non-Tenure Line (Research) faculty position in the Division of Epidemiology, Department of Health Research & Policy (HRP). HRP is a basic science department within the School of Medicine, and comprises a Division of Epidemiology and a Division of Health Services Research. The Epidemiology Division is the primary hub for epidemiologic teaching and research at Stanford, including methods for clinical research, with MS and PhD degree programs, an undergraduate co-terminal masters degree, and strong ties to numerous training and research programs. Stanford is a highly interdisciplinary university, with the medical school sharing the same unitary campus with departments and programs in a wide domain of quantitative, social, physical and biologic sciences. The predominant criterion for appointment in the University Tenure Line is a major commitment to and excellence in research and teaching. The major criterion for appointment for faculty in the Non-Tenure Line (Research) is evidence of high-level performance as a researcher for whose special knowledge a programmatic need exists. A doctoral level degree in Epidemiology or a related field, with appropriate research experience, is required.

We seek outstanding applicants with demonstrated research excellence and creativity in population-based or clinical epidemiology, including methodology. All areas of specialization will be considered, particularly genetic epidemiology, research in underserved populations and research employing methods for complex, linked datasets (*viz.*, “big data”). We invite applications from applicants at all ranks, appropriate for appointment at the Assistant, Associate or Full Professor level, contingent on qualifications and experience. The successful candidate will bring or develop a nationally recognized program of research and participate in the teaching of epidemiology at Masters and Doctoral levels. Qualified applicants should send (1) a letter that describes research and career interests and (2) a curriculum vitae. Candidates will be expected to supply three letters of reference upon request. Send applications electronically, with the subject line “Stanford Epidemiology Search” to:
