# Checklist: Working with HD Video

## HD Concepts
- Know how to create an HD video
- Understand video resolution - 480p (SD), 720p (HD), 1080i (HD), 1080p (HD)

## Required Tools
- Video camera (recommended: FlipHD)
- Video editing software (recommended: iMovie, Quicktime Pro, FlipShare)
- Recommended: External microphone
- Hard drive with sufficient storage space

## Video editing
- Edited the video, added titles and effects where appropriate
- Exported compressed video for presenting
- Maintained an original “source” copy to work from

## Using HD Video in a Presentation
- Ensured that you’ve exported a good version for your presentation, and placed it correctly - online or in the folder with your presentation
- Added a link in your presentation that points to the video
- Tested your video in your presentation to be sure that the link works, and that quality is good
