Welcome to the Procedure Rotation 2014-2015!

During this rotation, we hope that you have multiple opportunities to perform procedures and to learn about sedation. The rotation is 2 weeks with an “A” week that is focused on Valley Anesthesia and a “B” week that has time with SCVMC Sedation, Anesthesia and Oncology. See the schedule and Rotation Guide for details.

You are responsible for:

1. Notifying the site leads (Drs. Yeh, Mendez, Marina, Schlis) of any absences in advance.

2. Sending the completed Resident Information Form to all site leads at least one week prior to your start date. Be sure to include your continuity clinic date. If you are scheduled for a Tuesday morning clinic, let chiefs know ASAP so they can reschedule.

3. Tracking your procedures and returning the procedure log to Julie Kim within one week of completing of the rotation in order to pass the rotation and receive an evaluation. If the procedure log is not turned in, your evaluation will be suspended.

There are several resources on the residency website to prepare for this rotation under the Procedure Rotation in Core Rotations. Also, there is excellent information at: http://picued.stanford.edu/Resident-Education/index.html

We expect you to get yourself involved and jump from room to room if necessary. Introduce yourself to the anesthesia providers and jump right in. What you take from this rotation will really be what you put in!

Don't forget to track your procedures and turn this into Julie Kim at the end of the rotation. You can scan them and email if that is easier. Log these into MedHub as well.

Contact us with any questions and have fun!!!
