How does type 1 diabetes affect bone health in children and adolescents?

The Stanford Assessment of Muscle and Bone across the Ages (SAMBA) Center and the Division of Pediatric Endocrinology are seeking children ages **10-17 years** with **type 1 diabetes for at least 3 years** to participate in a study.

**Participation will involve:**
- DXA scan
- High resolution CT (HR-pQCT) scan
- Strength test
- Blood & urine test
- Questionnaire

**Potential benefits include:**
- Furthering our understanding of how bone and muscle health are affected by type 1 diabetes
- Participants will receive $100 for completion of the study
