Purpose

This directory was developed by the Early Assessment and Support Alliance (EASA) Center for Excellence at Portland State University. It was originally developed in partnership with the Foundation for Excellence in Mental Health Care (mentalhealthexcellence.org). Currently, it is maintained in partnership with the National Training and Technical Assistance Center (NTTAC) for Children’s Behavioral Health. For questions or concerns, please contact the EASA Center for Excellence at easac4e@pdx.edu.

NTTAC was created in 2015 by the Substance and Mental Health Services Administration (SAMHSA) to address the needs of high-risk children and youth. NTTAC’s TA Network is a partnership of 14 universities and organizations that include Children’s Mental Health Initiative, System of Care Expansion Implementation, and System of Care Expansion and Sustainability Cooperative Agreements, as well as to states, tribes, territories and communities without grant awards.

The EASA Center for Excellence is a TA Network partner. EASA consists of a statewide network of programs in Oregon with a coordinated approach to early psychosis intervention. It provides information and support to young people who are experiencing symptoms of psychosis for the first time. The EASA Center for Excellence provides training, research and program development statewide in Oregon and nationally. For more information, please visit http://easacommunity.org.

The purpose of this directory is to create a database and directory of early intervention programs for psychosis within the U.S. Additional goals include helping people find resources in their communities and facilitating a communicated network among these programs. This information is up-to-date as of May 15th, 2016, but its relevance may change as programs do.

Reflecting the growing national collaboration, this version of the directory features expanded national, state, and program information. This includes a new section on national resources, state contact people for early psychosis section, and program criteria (e.g., accepted age ranges, types of insurance accepted). If you are affiliated with a program and would like to contribute its information, please complete our survey.

This directory is undergoing continuing development as more data about programs becomes available. We at EASA recognize the importance of early intervention generally for young adults and families in need, and that early psychosis intervention is an active field of research. Thus, we aim to be inclusive and include all program information available. Thank you for your participation and interest.

**IEPA Early Intervention in Mental Health**

IEPA is an international network for those involved in the study and treatment of the early phases of mental health disorders encompassing a trans-diagnostic approach. With its origins in early intervention in psychosis, IEPA aims to enhance awareness of the early phases of mental health disorders more generally, their causes, prevention and the process of recovery. It aims to provide a network for international communication and collaboration between stakeholders.

**ADVOCACY & SUPPORT**

**The National Alliance on Mental Illness (NAMI)**

NAMI is the nation’s largest grassroots mental health organization. Provides support groups, advocacy, education, and many other resources. They are developing new resources for early psychosis intervention, including providing trainings and materials. They offer a toll-free national HelpLine that provides free referrals, information, and support. Visit their website or
call the HelpLine for more information about national and local resources.
