The Department of Psychiatry and Behavioral Sciences at the Stanford University School of Medicine is seeking to fill full-time positions in our growing Addiction Medicine Program, as part of a plan to develop a youth addiction service. The strategic expansion of our Addiction Medicine Program is supported by generous philanthropic funding from the Taube Foundation. Rank and salary will be commensurate with experience. Programmatic areas of need include a Director of the Youth Addiction Medicine Program. This position will be responsible for leadership and oversight of the clinical, research, and training mission of the young addiction service program. The Department also seeks Clinician Educators to provide expert clinical care and teaching of child and adolescent psychiatry and psychology trainees.

Our existing program in Addiction Medicine consists of an ambulatory outpatient dual diagnosis clinic, including medication assisted treatment, and individual, and group psychotherapy. The Department collaborates with our partners in clinics in other departments (Pain and Primary Care) to best serve the needs of our patients. Our Addiction Medicine Fellowship Training Program is approved by the American Board of Addiction Medicine and is ACGME accredited. We train two fellows per year from diverse specialties, and the program will continue to expand.

These positions are open to child psychiatrists, pediatricians and other physicians with subspecialty training in addiction medicine, or child psychologists with training in addiction medicine. Physician applicants must have a medical degree (or equivalent), be licensed or license-eligible in California, have an X-waiver license to prescribe buprenorphine, specialty board certification in addiction medicine, and significant experience in the diagnosis and management of patients with addictive disorders. Psychologist applicants must have a PhD or PsyD from an APA-approved clinical psychology program, completion of an APA-approved internship, and a minimum of one year of postdoctoral training in child psychology. Preference will be given to psychologist applicants who have completed the EPPP and are currently licensed in the state of California. Experience treating adolescents and young adults is particularly desired. Ideally, the chosen candidates would have experience in working in multidisciplinary clinical care services for patients with substance use disorders. These positions require skills and experience in clinical care and teaching.

The major criteria for appointment, reappointment and promotion for faculty in the Clinician Educator Line is excellence in the overall mix of clinical care, teaching, administrative and/or scholarship appropriate to the programmatic need the individual is expected to fulfill.

Faculty rank will be determined by the qualifications and experience of the successful candidate.
Stanford is an equal employment opportunity and affirmative action employer. All qualified applicants will receive consideration for employment without regard to race, color, religion, sex, sexual orientation, gender identity, national origin, disability, protected veteran status, or any other characteristic protected by law. Stanford also welcomes applications from others who would bring additional dimensions to the University’s research, teaching and clinical missions.

Interested candidates should send a cover letter, current curriculum vitae, and the names of three references to:
