   Overview of Program Training
About the Immunology Program

The PhD Program in Immunology is one of fourteen Stanford Biosciences programs. Our training philosophy is to provide outstanding training and education in immunology and to develop young investigators who will carry out innovative and groundbreaking research. We are committed to diversity, teaching, and excellence in research. We have a long tradition of collaboration among the immunology laboratories, with an emphasis on the application of cutting-edge approaches to problems in cellular, molecular, computational, and clinical immunology.

Immunology faculty members are leaders in their respective areas of research, and often incorporate bench to bedside approaches. Our PhD core coursework requirements plus strong electives in related disciplines, provide an integrated curriculum that spans basic and clinical immunology. Students can choose from either the Molecular, Cellular, and Translational Immunology (MCTI) track or the Computational and Systems Immunology (CSI) track. Graduate students in immunology actively participate in seminars, journal clubs, and the annual Stanford Immunology Scientific Conference at Asilomar. Students have access to state-of-the-art research facilities in the immunology laboratories, located in various departments in the School of Medicine, the Department of Biology, and the Palo Alto Veteran's Administration Medical Center.

**PhD Handbook**

This handbook provides information about program-specific policies and procedures. It also provides helpful resources to support you during your academic program.

Because graduate school is an active partnership between the student and the program, the program expects students to familiarize themselves with this information and to seek clarification as needed. Graduate students are expected to proactively seek academic and professional guidance and take responsibility for informing themselves of policies and degree requirements for their graduate program.

Students are held to the degree requirements included in the Stanford Graduate Academic Policies and Procedures (GAP: https://gap.stanford.edu/handbooks/gap-handbook/chapter-4/subchapter-5/page-4-5-1) and the Immunology program handbook published in the year of matriculation; program practices and procedures outlined in the handbook may change year to year.
Program Leadership and Administration

Welcome to Stanford University!

We are excited that you have chosen Stanford University’s PhD Program in Immunology for your PhD studies. We hope this graduate handbook will provide you with information you need as you progress toward your PhD degree in Immunology.

Stanford Immunology is home to faculty, students, postdocs, and staff who work together to produce internationally recognized research in immunology. The long tradition of collaboration among the immunology laboratories at Stanford fosters productive interdisciplinary research, with an emphasis on the application of molecular approaches to problems in cellular, translational, and clinical immunology. Faculty research interests include both basic science research and bench-to-bedsde approaches, as well as computational and systems immunology. Graduate students and postdoctoral scholars receive high caliber, state-of-the-art training through their participation in research, teaching, seminars, journal clubs, and the annual Stanford Immunology Scientific Conference.

Our congratulations and warm welcome!

Sincerely,

Olivia Martinez, PhD
Director
Stanford Immunology
Graduate Program, Immunology IDP
omm@stanford.edu
Graduate Program Committee

The Graduate Program Committee is responsible for the selection, admission, education and degree achievement of all pre-doctoral students in Immunology at Stanford. The Committee also sets programmatic policies for the graduate program.

Olivia Martinez, PhD  Chair, Surgery/Abdominal Transplantation
Sean Bendall, PhD  Pathology
K. Christopher Garcia, PhD  Molecular & Cellular Physiology
Aida Habtezion, MD  Medicine/Gastroenterology and Hepatology
Purvesh Khatri, PhD  Medicine/Biomedical Informatics, Chair, CSI Committee
Sheri Krams, PhD  Surgery/Abdominal Transplantation
Jonathan Maltzman, MD, PhD  Medicine/Nephrology
Bali Pulendran, PhD  Pathology and Microbiology & Immunology

PhD Curriculum

Candidates for PhD degrees at Stanford must satisfactorily complete a program of study that includes 135 units of graduate course work and research. At least 3 units must be taken with each of four different Stanford faculty members. Dr. Martinez will discuss and approve your selection of courses in your quarterly advising meetings. Study lists are submitted quarterly through Student AXESS with a total 10 units of coursework. Study lists containing less than 9 units do not meet the university’s minimum degree progress or visa requirements for international students. Study lists containing more than 10 units will trigger a larger student tuition bill, so please remember to register for 10 units only by the University deadline. There are serious financial consequences to missing these deadlines (a $200 late fee, losing the health care subsidy, etc.). Please note there are 2 important deadlines to keep in mind; the preliminary study list deadline and the final study list deadline.

Graduate students (including MD/PhD students in the graduate student phase of their training) must take all required courses for a letter grade. A letter grade of “C” is considered a failing grade. The University requires that you maintain a 3.0 GPA in order to remain enrolled at Stanford University.

Outline of Program Requirements

Courses and Seminars

Each student will also discuss scheduling courses and rotations with the Graduate Program Chair, Dr. Olivia Martinez, during their quarterly advising meetings. All students must be enrolled in exactly 10 units during Autumn, Winter, Spring, and Summer quarters until reaching Terminal Graduate Residence (TGR) status in the spring or summer quarter of their fourth year. Students are required to pass all courses in which they are enrolled; required and elective courses must be taken for a letter grade. Students must earn a grade of ‘B-’ or better in all courses applicable to the degree that are taken for a letter grade. Satisfactory completion of each year’s general and track specific requirements listed below is required. (Note that the units for some courses can be flexible in order to help students maintain exactly 10 units per quarter. Students should discuss with Dr. Martinez if they have difficulty coming up with a study list with the appropriate number of units.)

In the first-year advising meeting, Dr. Martinez will determine if the student’s undergraduate training in biology and cognate disciplines are equivalent to the required undergraduate Biology major curriculum at Stanford. If there are gaps in the undergraduate training, the first-year student and Dr. Martinez will design a specific first year curriculum that includes advanced undergraduate courses as needed.

All students in the two tracks, Molecular, Cellular, and Translational Immunology (MCTI) and Computational and Systems Immunology (CSI) are required to enroll in the following core courses:

Candidates for Ph.D. degrees at Stanford must satisfactorily complete a program of study that includes 135 units of graduate course work and research. At least 3 units must be taken with each of four different Stanford faculty members. **Students in the MCTI track are expected to complete all their core course requirements by the end of their second year; students in the CSI track should complete their core course work by the end of the third year.**

**Ethics/Responsible Conduct of Research Courses**
All students are required by the NSF and NIH to take **MED 255 The Responsible Conduct of Research.** This course must be completed by the end of the first year and is offered in all four quarters.

In the third through fifth year, students are required to take **IMMUNOL 258 Ethics, Science, and Society,** a refresher ethics course that is required by NIH and is offered every other year.

**Track Specific Requirements**
In addition to the general requirements listed above, students must also complete requirements within their track. Written petitions for exemptions to core curriculum and lab rotation requirements are considered only in the first year by the advising committee and the chair of the Graduate Program committee. Approval is contingent upon special circumstances and is not routinely granted.

**Molecular, Cellular, and Translational Immunology**
MCTI first-year students are required to take the following courses in their first year for a letter grade:

<table>

Computational and Systems Immunology
The CSI curriculum trains students to be computational and experimental scientists, who are expected to identify important problems in immunology and to devise integrated computational/ experimental plans for addressing them.

CSI Core (Required):
Students in the CSI track are required to take the following core courses in their first and second years, unless demonstrated by proficiency or coursework. For example, a student, with proficiency in concepts taught in CS 106A, may petition to be exempt from this course and go on to take CS 106B. Petitions to exempt from the courses CS 106A, CS 109, and CS 161 must be approved by the Chair of the CSI track and the Director of Immunology.

### Immunology Startup and First Year Advising

Since students enter with differing backgrounds, each student is assisted by the first-year adviser in selecting courses and lab rotations in the first year and in choosing a lab for the dissertation research. In addition, the Immunology Startup, a five-day introduction to immunology in early September, exposes incoming Immunology PhD students to a variety of techniques and concepts. Students learn basic laboratory techniques in immunology and participate in in-depth discussions with faculty.

All students must be enrolled in exactly 10 units during Autumn, Winter, Spring, and Summer quarters until reaching Terminal Graduate Residence (TGR) status in the spring or summer quarter of their fourth year. Students are required to pass all courses in which they are enrolled; required and elective courses must be taken for a letter grade. Students must earn a grade of 'B-' or better in all courses applicable to the degree that are taken for a letter grade. Satisfactory completion of each year's general and track specific requirements listed below is required. During the first year, degree progress is monitored closely by the first-year adviser, Dr. Olivia Martinez, in quarterly meetings and by the Stanford Graduate Program Committee in a final advising session in June.

First-year students are required to complete three lab rotations in at least two immunology labs. In the Spring Quarter, two mini-rotations of six weeks each may be arranged. After joining a lab, students are required to meet with their thesis adviser within 30 days to complete the Individual Development Plan (IDP). Students continue to complete the IDP annually.

A specific program of study for each student is developed individually with the first-year adviser, Dr. Olivia Martinez.

Note: The Advisor-Advisee relationship is an important component of the graduate school experience. When you have chosen a lab, you and your PI have access to resources to align your expectations and discuss future plans. Students are encouraged to meet weekly with their advisor regarding their thesis project and at least annually regarding career development. The Office of the Vice Provost for Graduate Education shares best practices for Advising & Mentoring relationships: [https://vpge.stanford.edu/academic-guidance/advising-mentoring](https://vpge.stanford.edu/academic-guidance/advising-mentoring)
Committee Meetings

Graduate students are required by the University, Biosciences, and Immunology Program to hold annual committee meetings. Usually, this committee consists of 3-4 faculty members selected by you in discussion with your PhD advisor. At least two of the committee members (including your advisor), must be members of the Immunology program faculty. Use these meetings to take a step back from day-to-day research, discuss your ideas, and receive feedback.

- 3rd year: meet with your thesis committee
- 4th and 5th years: will need to have committee meetings twice a year until degree completion
- 5th years and beyond: you may request a faculty member of the Graduate Program Committee to be present at these committee meetings

Best practices for arranging committee meetings are:

- Request a meeting at least 1-2 months in advance
- Send a Doodle calendar request or similar to your committee members
- The University Registrar requires graduate students to meet with their thesis committees as a group and not one-on-one. This best practice avoids miscommunication.
- Annual meetings should be held regardless of obstacles in research progress.

The Annual Committee Meeting Form should be filled out and signed by all of the committee members in attendance at each meeting (https://med.stanford.edu/immunol/phd-program/resources.html). Students will upload the signed forms on Axess. Dates of committee meetings for all immunology graduate students are reported to the Registrar.

Individual Development Plan

Graduate students are required to meet with their faculty mentors once a year to discuss an individual development plan (IDP). The IDP is intended to help the students take ownership of their training and professional development. The goals of the IDP are to: 1) pause, reflect and intentionally think on short-, mid- and long-term goals; 2) identify resources that help to achieve these goals; and 3) have open and direct dialogue with the Ph.D. thesis adviser and establish clear expectations and steps.

Your Individual Development Plan (IDP) and annual planning meeting with your advisor are intended to help you:

- Take ownership of your training and professional development.
- Pause and reflect! Amidst daily research activities, it is easy to lose sight of longer-term goals.
- Think intentionally about your short-, mid- and long-term training and development goals.
- Identify and use resources to help you achieve your goals.
- Have open and direct dialogue with your mentor(s).
- Establish clear expectations/steps.

Students and their advisors share responsibility for completing the IDP, as well as the consequences of not completing the IDP by the deadlines below. Failure to comply with IDP requirements will

- negatively impact Stanford’s ability to receive NIH funding; and
• incur a hold on student registration that prevents stipends from being funded.

**IDP Process and Deadlines**

1. Schedule your annual mentoring meeting with your advisor **by June 1**.
2. Download and complete the appropriate [IDP form](#); it will prompt you to assess your skills and progress, set developmental goals and identify any training needs.
3. Hold the meeting with your advisor by **August 1** to discuss your IDP, review progress, set goals and clarify expectations
4. Verify by **August 1** that you have met and discussed your IDP with your advisor in Graduate Student Tracking (GST) at [https://med.stanford.edu/gst/](https://med.stanford.edu/gst/).

See [http://biosciences.stanford.edu/current/idp/](http://biosciences.stanford.edu/current/idp/) for more information and IDP forms, including extensive FAQs and resources for both faculty and students.

**Qualifying Exam Part I**

Immediately after the final examination period in Spring Quarter of the first year, first-year immunology graduate students are required to give a presentation on one of their three rotations to the Immunology graduate program committee (Qualifying Examination Process, Part I). After the rotation presentation, the first-year student will meet with the Stanford graduate program committee in a one-on-one advising session to review degree progress and choice of a PhD thesis lab.

**Qualifying Exam Part II**

In Autumn Quarter of the second year, students focus on preparing for Part II of the Qualifying Examination Process, the general oral examination and the Ph.D. thesis dissertation proposal. The Qualifying Exam Part II must be completed by December 17 of year 2. The student is required to pass the oral examination and write a thesis dissertation proposal which is presented to and evaluated by a qualifying examination committee composed of three faculty members, two of whom must be from the Immunology program faculty and the third faculty member may be from a department outside the program. The PhD adviser is not present for Part II, but is required to submit an evaluation and grade for the PhD thesis dissertation written proposal. Upon successful completion of Part II, the student files a petition for PhD candidacy and form their reading dissertation committee.

**Dissertation Proposal Committee Requirements:** The members of the thesis committee are chosen by the student and the PhD advisor. The Qualifying Exam Committee is composed of at least two members of Immunology Program faculty and may include the thesis advisor. The thesis advisor is not present for the qualifying examination. The student should work with the PhD advisor to identify a chair of the committee in advance of the defense. The chair will be responsible for preparing a brief summary of the exam and providing this to the program administrator, the candidate and the PhD advisor after the exam is completed.

**Guidelines for the Proposal Paper:** For the written thesis proposal, the student will follow the instructions for an NIH research grant in terms of format, except that he/she may have limited preliminary results. The written proposal should be 18 pages double-spaced, instead of the standard 13-page single-spaced NIH (RO1, PHS form 398) proposal. All tables, graphs, figures, diagrams, and charts must be included in the 18-page limit. Failure to follow the NIH format, including exceeding font size (Arial font, 11 pitch), 0.5” margins, or page limits may result in the Committee’s decision to have the student rewrite the thesis proposal before
giving a passing grade. It is strongly recommended that the student work closely with the Committee, particularly the Thesis Advisor, in preparing a hypothesis-driven thesis proposal. Students should review successful NIH grants prepared by Faculty members as a template. These are available through the Immunology Program Administrator. The content for the thesis proposal should include the following:

- **Specific Aims.** List the broad, long-term objectives and what the specific research proposed is intended to accomplish. What is the problem you are trying to solve? Why is it important? Include the hypothesis. The hypothesis answers the questions: what is it that you intend to do? And why is the work important? The single, biggest mistake made in grant applications and thesis proposals is failure to succinctly state a testable hypothesis. PHS 398, Part I. Section 5.5.2: “State concisely the goals of the proposed research and summarize the expected outcome(s), including the impact that the results of the proposed research will exert on the research field(s) involved. List succinctly the specific objectives of the research proposed, e.g., to test a stated hypothesis, create a novel design, solve a specific problem, challenge an existing paradigm or clinical practice, address a critical barrier to progress in the field, or develop new technology.”

- **Research Strategy.** The Research Strategy is composed of three distinct sections: Significance, Innovation, and Approach. Note that the Approach section also includes preliminary studies. What is the current scientific background of the thesis project? The existing body of knowledge in the relevant areas of the thesis project should be critically evaluated. What gaps are there in this body of knowledge? Where does your thesis project fall? State concisely the importance of the research described by relating the specific aims to the broad long-term objectives. The Research Strategy should be organized in the specified order with appropriate headings: Significance, Innovation, and Approach. The following is excerpted from PHS 398, Section 5.5.3:

  a) **Significance**
  - Explain the importance of the problem or critical barrier to progress in the field that the proposed project addresses.
  - Explain how the proposed project will improve scientific knowledge, technical capability, and/or clinical practice in one or more broad fields.
  - Describe how the concepts, methods, technologies, treatments, services, or preventative interventions that drive this field will be changed if the proposed aims are achieved.

  b) **Innovation**
  - Explain how the application challenges and seeks to shift current research or clinical practice paradigms.
  - Describe any novel theoretical concepts, approaches or methodologies, instrumentation or intervention(s) to be developed or used, and any advantage over existing methodologies, instrumentation or intervention(s).
  - Explain any refinements, improvements, or new applications of theoretical concepts, approaches or methodologies, instrumentation or interventions.

  c) **Approach**
  - Describe the overall strategy, methodology, and analyses to be used to accomplish the specific aims of the project. Unless addressed separately in the Resource Sharing Plan, include how the data will be collected, analyzed, and interpreted as well as any resource sharing plans as appropriate.
• Discuss potential problems, alternative strategies, and benchmarks for success anticipated to achieve the aims.
• If the project is in the early stages of development, describe any strategy to establish feasibility, and address the management of any high risk aspects of the proposed work.
• Point out any procedures, situations, or materials that may be hazardous to personnel and precautions to be exercised. A full discussion on the use of Select Agents should appear in 5.5.11 below.
• If research on Human Embryonic Stem Cells (hESCs) is proposed but an approved cell line from the NIH hESC Registry cannot be identified, provide a strong justification for why an appropriate cell line cannot be chosen from the Registry at this time.

If the qualifying exam proposal has multiple Specific Aims, then the applicant may address Significance, Innovation and Approach for each Specific Aim individually, or may address Significance, Innovation and Approach for all of the Specific Aims collectively.

The student should include any preliminary studies that will help establish the appropriateness and feasibility of the thesis project. The student is expected to make use of the faculty advisor’s preliminary results if he/she has not already obtained a significant amount of preliminary results. In light of the early deadline for the General Orals and Qualifying Examination, Dec 17th, a student’s thesis project may change several months after the dissertation proposal is defended. If such a change occurs, the student should inform his/her Dissertation Proposal Committee by submitting a short, three-page written report describing the necessary changes. If no changes are necessary, then the student should proceed in a normal fashion, e.g., scheduling the annual dissertation committee meeting a year later.

c. Literature Cited. Literature citations should be listed at the end of the proposal. Each literature citation must include the title, names of all authors, book or journal, volume number, page numbers, and year of publication.

Oral Exam: The Oral Examination is intended to test the student on the proposed research area but may also include an examination on general immunology knowledge. The format of the Oral Examination typically begins with a presentation of the thesis proposal. Students should prepare a presentation of 45-50 minutes on the proposed research focusing on experimental design, data interpretation and potential problems. Preliminary data should be included. Faculty will question the student about the work, its interpretation, the methods, and background questions relevant to the proposal. The thesis mentor is not allowed to be present at the Oral Examination.

After the Oral Examination is completed the designated Chair of the Dissertation Proposal Committee and the thesis advisor will both provide a written evaluation (paragraph) and grade of the dissertation proposal. The Dissertation Thesis Proposal Form should be signed by all of the committee members and is available on http://med.stanford.edu/immunol/phd-program/resources.html. The evaluation will describe the strengths and weakness of the proposal. The letter grade will be entered into the university’s system and appear on the student’s transcript. A student receiving a grade lower than B, may be asked to rewrite the dissertation proposal. If the Dissertation Proposal Committee does not give a passing grade
to the student’s rewritten version, then the Graduate Program Committee will meet to consider whether extenuating circumstances warrant permitting the student to be examined a second time. The second opportunity to take the Qualifying Exam should occur before the student’s third year begins. If so, the Graduate Program Committee will permit a second examination, or if he or she is given such an opportunity and fails the second examination, he or she will be dismissed from the Program. The dismissal shall be made in writing.

**Advancing to Candidacy**

After successful completion of the Qualifying Examination, the student may apply for admission to PhD candidacy ([https://stanford.app.box.com/v/appcanddoct](https://stanford.app.box.com/v/appcanddoct)).

Admission to PhD candidacy means that the student has completed the Qualifying Examination and most of the course requirements of the Immunology Program and is now ready to begin thesis research leading to a dissertation and University oral exam. The Application for Candidacy for Doctoral Degree form must be filled out and submitted to the Program Administrator at the end of the winter quarter of the second year; timely submission of graduate paperwork is required for certifying satisfactory degree progress for many fellowships, in particular the NSF and the SGF.

The schedule will be adjusted to fit the needs of MSTP and MD/PhD students, or students who transfer from another program.
QUALIFYING EXAM Part II CHECKLIST

- Student joins a Lab
- Student forms and confirms Quals Committee
- Program Director and Administrator are notified of Quals Committee members
- Student sets a date for qualifying exam that is before December 17 of Year 2.
- Student notifies Program Administrator of exam date and time
- Student reserves a room for the exam.
  - Reserve the room for 2.5-3 hours
  - Always, CCSR, LKSC, or MSOB: http://med.stanford.edu/irt/classrooms/features
  - Clark Center: https://biox.stanford.edu/about/building-services/room-scheduling
  - Modulars: Modular A – Contact Karen Jarnagin, Executive Assistant, Stanford Center for Biomedical Ethics at jarnagin@stanford.edu or 650-721-5335.
    Modular B – Contact Lina Hansen, Student Services Officer, Immunology Program at lhansen@stanford.edu or 650-736-1980.
  - Contact the Program Administrators if assistance is needed
- Student notifies Quals Committee and Program Administrators of exam location
- No later than 3 weeks prior to the exam, student confirms the Quals Chair and notifies the Program Administrators
- 2 weeks prior to the scheduled exam date, student emails the written proposal to the Quals Committee and Program Administrators. Failing to email this document 2 weeks in advance may result in committee opting to reschedule the exam.
- On exam day: Student brings the following forms to the exam in order to easily obtain the required signatures: Immunology Program Qualifying Exam Form, Application for Candidacy, Doctoral Dissertation Reading Committee Form, and Petition for Non-Academic Council Doctoral Committee Members Form (if applicable)
- Within one week of the Qualifying Exam date: Student submits all completed and signed forms to the Program Administrator, who will record the milestones in Axess.
TGR Status
Terminal Graduate Registration (TGR) allows students to register at a significantly reduced tuition rate while they work on the dissertation or thesis, or department project.

Eligibility and Timing
To be eligible for TGR, you must have:

1. Completed at least 135 units prior to starting the TGR quarter, and completed all residency requirements for both your active and completed degree programs
2. Completed all course requirements, including the courses that you listed on your Application for Doctoral Candidacy (or had any changes approved by the Program Chair)
3. Submitted your Doctoral Dissertation Reading Committee (DDRC) form

The timing for each student may be different; as such, it’s important that you track your own progress and keep tabs on how many units you have/will complete, and when you will be eligible for TGR. The Program will do its best to send reminders, but it’s ultimately each student’s responsibility to know where s/he stands with regard to degree progress.

Withdrawing from a course, receiving No Credit for a course, or having a grade not reported by an instructor will all affect your Cumulative Unit Count, and your eligibility for TGR status. As such, it is important that you review your own transcript. The typical student will near TGR status in the 4th year of study. Assuming a student successfully completes 10 units per quarter, s/he will have completed 130 units at the end of Fall quarter of the 4th year. This leaves just 5 more units necessary to reach TGR status.

- A student in this situation may consider requesting Reduced Tuition from the Registrar; this status allows a student to register for 3-7 units for the one quarter prior to being on TGR status.
- This is not an option for students on an F-1 or J-1 visa, and those who may have existing student loans, as a drop to below normal full-time registration status may be problematic.

Please note: While it may seem like a good idea to register for more than 10 units a quarter in order to reach TGR status sooner, doing so will increase tuition costs by about $5,000 per quarter, and most funding sources (Training Grant, NSF, SGF), can’t cover that level of tuition spending.
TGR CHECKLIST

How to Apply for TGR Status
Deadline: The petition for TGR status must be submitted to the Registrar’s office prior to the start of the quarter in which you would like to be under that status (e.g., if you want to be TGR in Spring, the form must be submitted before the end of Winter quarter).

____ Complete at least 135 units prior to the term in which you will be on TGR status. Look at your transcript; your Earned Unit Cumulative Total at the very end of the transcript must be at least 135 and the transcript should not have any GNRS.

____ Complete all Immunology course requirements (Core Requirements, Journal Club, TAships, advanced courses, and area requirements and statistics as applicable).

____ Complete the TGR Request form on Stanford eForms. Log in to Axess, click on the Student tab, and choose “Student eForms” from the Quick Links menu. Click on “Available Forms” to find student forms.

____ Sign the form, have your advisor sign the form, and notify the program administrators at least two weeks prior to the start of the quarter in which you would like to start TGR status.

____ After a decision is made on your request, you’ll get instructions from the Registrar.

____ If you do not receive an email, the Registrar did not receive your form and you are not on TGR status. You should follow up immediately.

Registering Under TGR Status

Once TGR status has been approved:

____ Register for Immunol 802 with your mentor for 0 units.

____ Do not register for research units again. You will always register for Immunol 802 for 0 units.

____ You can take up to 3 units of coursework without additional charge. If you would like to take more than 3 units of coursework, you will need to ask your mentor to cover the overage in tuition fees.

____ If you do end up taking a class, you will still need to enroll for TGR (Immunol 802) each quarter.
Finishing up: The Final Year
Please become familiar with all of the dates and deadlines regarding your oral defense, submitting your dissertation, and submitting required forms and paperwork. Under no circumstances are extensions granted, and missing deadlines can mean that you don’t graduate as planned.

The Final Countdown
There are three administrative hurdles to finishing your degree:
1. Defending your thesis
2. Submitting your dissertation
3. Applying to graduate

With some advanced planning, it is possible for all three steps to completed in one quarter. Some students make an arrangement with their mentor to take the quarter after their defense to complete work on, and submit, their thesis. This is called a “Graduation Quarter.” During Graduation Quarter your tuition can be reduced to $100 for one quarter only, which leaves your mentor only covering your stipend and health insurance. You must have completed your thesis defense in order to qualify for the Graduation Quarter.

• The form to enroll in this status must be submitted before the first day of classes of the intended Graduation Quarter (but please don’t wait until the last minute to get the required signatures)
• Complete the Graduation Quarter Petition form on Stanford eForms. Log in to Axess, click on the Student tab, and choose “Student eForms” from the Quick Links menu. Click on “Available Forms” to find student forms.
• MSTP students usually submit their dissertation and apply to graduate at the same time they will be awarded the MD degree.

First Author Paper Submission
By the fourth or fifth year, graduate students are expected to submit a first author paper for publication. This milestone must be completed before defending a Ph.D. thesis.

Doctoral Dissertation
Before embarking on the dissertation defense process, the graduate student must submit a Petition to Defend to the Director of the Immunology Graduate Program and meet with the Director. Important milestones and degree requirements must be met before proceeding to the oral examination including submission or publication of a first author manuscript. A substantial draft of the dissertation must be turned in to the student’s oral examination committee at least one month before the oral exam is scheduled to take place. Prior to the PhD orals defense, an orals chair is chosen to lead the orals committee, which is a distinct committee, but the basic membership is identical to that of the dissertation reading committee. The Orals Chair must hold a primary appointment in a Department that is not represented by the Departments of the other committee members. In the case of large departments such as Medicine, the Departmental Division of the Chair must not be shared by the other members of the committee. The correct number of faculty committee members for the orals committee is five. For students with two PhD thesis co-advisors, the exact number of faculty committee members is still five. The final written dissertation must be approved by the student’s reading committee and submitted to the Registrar’s Office. Upon completion of this final requirement, a student is eligible for conferral of the PhD degree.
Timing of the Thesis Defense
All of your committee members (including the chair, see Thesis Defense Instructions for more information) must be present at your oral defense, so this date may hinge largely on when they are available. In addition, if you plan to defend, submit your dissertation, and graduate during the same quarter, you want to allow enough time after the defense to complete, format, and submit your dissertation – and submit all required graduation forms - in accordance with posted deadlines.

Timing of the Dissertation Submission
It’s extremely important to consider the timing surrounding submitting your dissertation. You want to allow enough time after your oral defense to incorporate any resulting changes and finish the written dissertation in time for the submission and approval deadline. If your oral defense is well in advance of the deadline to submit the dissertation, you’ll have plenty of time to make revisions. If your oral defense date is close to that quarter’s dissertation submission deadline, you may not have enough time to finish the dissertation. If you find yourself in a pinch for time, it would make sense to talk with your mentor about arranging for a “graduation quarter” as described above, and withdrawing your application to graduate if you’ve already submitted it.

Timing of the Application to Graduate
You must file a Notice of Intention to Graduate (“Apply to Graduate”) through AXESS for the quarter you complete the degree requirements. If you do not finish in time, you will need to annul the initial Intention to Graduate and submit a new one for the quarter in which you intend to finish. Please refer to the University calendar for deadlines. There are no exceptions for missed deadlines and is a hard and fast University rule. The deadlines are listed in AXESS and on the academic calendar.

Deadlines to submit the Application to Graduate in Axess are posted here: [http://studentaffairs.stanford.edu/registrar/academic-calendar](http://studentaffairs.stanford.edu/registrar/academic-calendar)

If you miss the standard Application to Graduate deadline, there is also a Late Application deadline, with a fee that you will be responsible for paying: [https://registrar.stanford.edu/students/graduation/applying-graduate](https://registrar.stanford.edu/students/graduation/applying-graduate)

Withdrawing an Application to Graduate
If you apply to graduate but are not able to submit your thesis by the deadline, you will need to withdraw your application to graduate for that quarter via Axess. Visit the Registrar’s Office website for more information: [https://registrar.stanford.edu/resources-and-help/student-forms/graduation-and-commencement-forms](https://registrar.stanford.edu/resources-and-help/student-forms/graduation-and-commencement-forms)

This form must be submitted to the Registrar’s office no later than 12:00 pm (noon) on the day of the thesis submission deadline. If you withdraw your application to graduate, be sure to ask the Registrar if you are required to submit a new Application to Graduate in the subsequent quarter.

Degree Conferral and Statement of Completion
In order to have your degree conferred, you must have completed all the University and Department requirements and submitted all work before the deadlines. The University imposes requirements such as residency, submission of official scores and transcripts, payment of fees, return of library books, etc., that the Immunology Program has no control
over and sometimes no knowledge of. Please pay attention to the messages, letters, and notes you receive and respond to them in a timely manner.

Degrees are officially conferred weeks after the end of a given quarter. In the interim, PhD students often need what is called a Statement of Completion. This is a letter from the University Registrar confirming that a student has submitted a dissertation/thesis and will be recommended for a degree by the Faculty Senate. Students typically use this for postdoctoral appointments or to obtain employment before their degree is actually conferred.

Prior to requesting a Statement of Completion, the submission must first be approved by both the Final Reader and Registrar’s Office. Then, students should submit a HelpSU ticket directed to the Records Unit in the Office of the University Registrar. If you prefer to have the letter emailed, please provide an email address in your ticket.
THESIS DEFENSE CHECKLIST

Make Initial Arrangements

______ Submit a Petition to Defend to Dr. Olivia Martinez and arrange to meet with her in person. Once the Petition to Defend is approved, students may proceed with the dissertation defense process.

______ Make sure that you have a first-author manuscript that has been submitted, is in press, or has been published.

______ Schedule the orals at least two months prior to the anticipated date to accommodate the committee members’ schedule. Inform the Program Administrator and Dr. Martinez of the date. You should plan on one hour for a public presentation, including time for questions from the audience, followed by 30-90 minutes of closed session with your committee, leading to a vote.

- Reserve rooms for 2.5-3 hours
- Clark Center: https://biox.stanford.edu/about/building-services/room-scheduling
- Alway, CCSR, LKSC, or MSOB: http://med.stanford.edu/irt/edtech/classrooms/features.html
- Contact the Program Administrators if assistance is needed

Oral Examination Chair
Students should confirm the Orals Examination chair no later than three weeks prior to the defense date.

The role of the Oral Exam (Thesis Defense) chair is similar to that of the qualifying exam chair; s/he oversees the proceedings. The chair sets the tone and organization of the oral exam, i.e., order of questioning, timing of questioning, leads the discussion when student has left the room, provides ballots for a secret vote, signs the Oral Examination Form at the end of the meeting, and may write up a brief report for the program director and administrator stating that the student has passed. The chair is allowed to participate in the scientific discussion but is not required to do so.

Things to note when selecting your oral examination chair:
1. The responsibility of selecting a chairperson for your oral exam falls on the student, with advice from the mentor.
2. The orals chair cannot be someone who is already part of your committee.
3. The orals chair must be a member of the Academic Council; faculty with Medical Center Line appointments cannot serve as Oral Exam chairs.
4. The Oral Exam chair cannot have a primary appointment in the same department as the thesis advisor/mentor(s). A courtesy appointment in that department is fine.
5. In the end, the orals committee will consist of: The mentor (or co-mentors), 3 Readers, and 1 Committee Chair. If the primary mentor is not a member of Academic Council, the student will need a co-mentor who is on Academic Council; this will increase the number of committee members and a formal written request to the Vice
Provost of Graduate Education will need to be made in advance to approve the non-Academic council member and to add the co-advisor to the committee.

(No later than) Three Weeks Prior to Defense Day

_____ Send program administrators the following information:
   1. Defense Information: Date, Time, Location, and Title of the thesis (for publicity purposes).
   2. Flyer to be distributed/posted in SOM buildings and on the Immunology website
   3. Name of the oral examination chair
   5. One-page abstract of the thesis

_____ Send a reminder to all members of your committee and confirm that they will be present; Program Administrators will send the first announcement of your defense to Immunology List.

Two Weeks Prior to Defense Day

_____ Submit your complete thesis to the entire orals committee (including the chair). The student’s thesis advisor should read and approve the thesis document before it is sent to the committee.

_____ Program Administrators will deliver a packet to your oral examination chair that includes your abstract, Oral Examination Form, voting ballots, instructions on how to lead the defense/meeting, and what to do with the Oral Examination Form after the defense.

_____ Practice presentation;

_____ Only one slide (and 2-3 minutes of comments) should be included for acknowledgements

_____ Check audiovisual setup for the defense room

_____ Post flyers

_____ Send email announcement of defense

One Week Prior to Defense Day

_____ Program Administrators will send the second announcement of your defense to Immunology List.

On Defense Day

_____ Orals committee chair brings the packet (with Orals Form) to the defense

_____ Bring your (properly formatted) dissertation Signature Page so you can get the signature of all your committee members while they are in the same room. Refer to the Registrar’s Office for the Dissertation and Thesis Submission guidelines.
All members of your committee must be physically present for the entire public portion, and the private portion, of your defense. If a committee member is not present, you will not be able to graduate and will need to reschedule your defense.

**After Thesis Defense**

- Have your orals chair sign the University Oral Examination Form and return the form and chair packet to the Program Administrators by the next business day. They will enter the Oral Examination Milestone as completed in Axess.
- Have your committee members sign the Signature Page for the written dissertation. We have acid free paper to use for the signature page. Keep it in a safe place until you are ready to submit it to the Registrar.
- Finish thesis, obtain reading committee members’ signatures, and submit to the Registrar. Instructions may be found on: http://studentaffairs.stanford.edu/registrar/students/dissertation-thesis
- Apply to graduate (or for a Graduation Quarter) by the Registrar’s deadline
- Celebrate!
Finances

General Policy
Students admitted to the program are offered financial support for tuition, a living stipend, insurance coverage, and for first-year graduate students, a small allowance for books/travel. Eligible applicants are required to apply for independent fellowships such as from the National Science Foundation (NSF) or National Defense Science and Engineering Graduate Fellowships. NSF Fellowship applications are due in November of the year prior to matriculation in the graduate program, and only one more NSF application is permitted in the first or second year. Students who are eligible will be required to submit an NSF application during Autumn quarter of year 1. Immunology graduate students may continue to apply for outside fellowships after matriculation. Admitted students are typically offered financial support in the form of Stanford Graduate Fellowships, NIH traineeships, or research assistantships.

Direct Deposit
Axess (http://axess.stanford.edu) is the primary link for funding information and other sites relevant to a student’s academic career at Stanford. After receiving a SUNet ID, students visit Axess to securely enroll in direct deposit, view pay statements and declare state and federal tax withholding allowances.

These stipends are supplemented up to the approved stipend level for the academic year, either as a stipend or a biweekly payment. Bi-weekly payments usually have taxes withdrawn whereas stipends do not; a student will receive a bi-weekly paycheck as either a supplement to a fellowship stipend or as a research assistantship in their 4th-5th years. Below is a typical funding schedule (Funding Timeline).

Funding Options

| Year 1 | Immunology Training Grant (primary funding for 2 years) Immunology Program Flex Funds, stipend supplement SGF (3 years) NSF (3 years). Students are only allowed to apply twice. Students are required to apply for at least 2 external fellowships (e.g., NSF, NIH, or NGSEG) |
| Year 2 | Immunology Training Grant, 2nd and last year School of Medicine stipend and tuition supplements from non-NIH sources SGF, 2nd year NSF, 1st or 2nd year NIH Minority Predoctoral Fellowship, 2nd year after Quals Part II Students apply for external and internal fellowships |
| Year 3 | School of Medicine stipend and tuition supplements from non-NIH sources SGF, 3rd and last year NSF, 2nd or 3rd year NIH Minority Predoctoral Fellowship, 2nd or 3rd year Students apply for external and internal fellowships |
Year 4

| Immunology Training Grant, possible 4th and last year |
| School of Medicine stipend and tuition supplements from non-NIH sources |
| NSF, 3rd and last year |
| NIH Minority Predoctoral Fellowship, 3rd or 4th year; internal fellowships (Mason Case, Lieberman Fellowships, BIO-X) |
| Research Assistantships; School of Medicine tuition supplements from non-NIH sources |
| TGR in Spring or Summer quarter |

Students apply for external and internal fellowships

Year 5

| Research Assistantships; Preceptor is responsible for both salary and TGR tuition. |
| NIH Minority Predoctoral Fellowship, 5th and last year; internal fellowships (Mason Case, Lieberman Fellowships, BIO-X) |
| TGR (Terminal graduate residence=lower tuition costs) |
| Completion of other miscellaneous fellowships |

Year 6 and beyond

| Research Assistantships; Preceptor is responsible for both salary and TGR tuition. |

Fellowships for Graduate Students

Eligible first and second year PhD students will be appointed to the Immunology Training Grant for the first two years. Beyond that, students will be funded with non-NIH sources. All eligible first and second year PhD students are required to apply for a National Science Foundation Graduate Research Fellowship (NSF). Typically the application deadline is in late October/early November. Please see the NSF website for deadlines: [https://www.fastlane.nsf.gov/grfp/Login.do](https://www.fastlane.nsf.gov/grfp/Login.do).

Eligible students in their third year and beyond are expected to apply for other fellowships. These include (but are not limited to) NIH NRSA, SGF, SGIF, Mason Case, BIO-X, DoD NDSEG, and DARE fellowships.

Students are encouraged to consult their faculty advisors when preparing fellowship applications.

For a comprehensive listing of fellowships, please visit the Stanford School of Medicine Research Management Group page: [https://med.stanford.edu/rmg/funding.html](https://med.stanford.edu/rmg/funding.html).

Charges/Fees

Charges are the primary component of the university bill. Charges are compiled from various offices and departments and placed on the bill. Examples of charges a student may see on the university bill:

- **Tuition fees.** These charges depend on the number of units taken. The Immunology program will process payments for tuition fees (not to exceed the 10 unit tuition rate).

- **Housing, room and dining charges.** These fees are charged by Residential & Dining Enterprises. Other housing charges may include early arrival fees, repair fees and termination of occupancy fees. The Immunology program does NOT cover housing costs. If a student would like to have housing costs deducted from their paycheck it is the student’s responsibility to set up the deductions. For more information on payroll deductions please see [https://sfs.stanford.edu/student-accounts/pay-your-bill/payroll-deduction](https://sfs.stanford.edu/student-accounts/pay-your-bill/payroll-deduction).

- **Health Insurance (Cardinal Care) fee.** All registered students are automatically enrolled in Cardinal Care Insurance at the beginning of each quarter. The Immunology
program will pay Cardinal Care for each student. You may decide to waive Cardinal Care if you have alternative coverage. See Waiving Cardinal Care for Domestic Students and International Students.

• **Campus Health Services fee.** This fee supports many of the services provided by Vaden Health Center and is mandatory for all undergraduate and graduate students enrolled in Stanford. The services provided by Vaden Health Center are not covered by health insurance (Cardinal Care) fees. The Immunology program is not permitted to pay this fee directly; however, the amount of the fee is added to each student’s stipend/salary to cover the cost.

**Tax Information**

Graduate students are supported by fellowship stipends or research assistantships. More information regarding the Student Graduate Financial payroll systems can be found on: [http://www.stanford.edu/group/fms/fingate/students/index.html](http://www.stanford.edu/group/fms/fingate/students/index.html)

This website provides information on how to read and understand your university bill, tax information, payroll for graduate students on research assistantships.

1. If you are primarily supported by a fellowship, you are receiving a quarterly stipend. Stipend checks are issued the day before classes. Stanford does not withhold tax on quarterly stipends. The amount of tax varies according to total income, dependency status, treaty status for international students, and individual circumstances. The student is responsible for making quarterly estimated tax payments to the IRS and California’s state tax board. Students who are currently paying for their own tuition are issued a 1098T, which allows them to claim educational tax credits. You should NOT use the 1098T for tax purposes as your stipend and tuition are entirely covered by fellowship funds.

2. Students are paid on the 7th and 22nd of the month (or on the preceding work day if these dates fall on a weekend or holiday). Federal and state taxes from research assistantships should be filed on April 15th. Students can fill out an on-line W-4 application through Student AXESS. At the end of January, a W2 is sent annually to students supported by bi-weekly pay.

3. International students may receive tax assistance and may contact Bechtel to see what resources are available. Instead of a 1098-T, international students will receive a 1099-T (stipend pay) or 1042-S (bi-weekly pay). Fellowship stipends paid to non-U.S. residents are subject to a 14% withholding, regardless of the number of dependents.

The Office of Student Financial Services offers more tax information through their website: [https://sfs.stanford.edu/taxes](https://sfs.stanford.edu/taxes). To be absolutely certain about how to file your taxes, please consult a tax professional.

**Other Funding Resources**

- [Graduate Cash Advance](#) – Helps graduate students with expenses before their graduate financial support is posted to their student account and/or TA/RA salary is paid
- [Graduate Student Aid Fund](#) – Assists with University fees (i.e., health services fee, health insurance)
• **Graduate Grant-in-Aid Funds** – If graduate students experience an unexpected financial hardship (e.g., medical, legal), it is possible to apply for grant-in-aid (small grants, not loans)

• **Financial Aid Office** – Information and application forms for federally subsidized student loans

• **1:1 Financial Coaching** – Mind Over Money’s 1:1 financial coaching program provides students with the opportunity to share their personal financial circumstance with university-trusted individuals and explore ideas and build skills

• **Graduate Housing Loan** – assists with move-in costs for off-campus housing

• **Opportunity Fund** – assistance with expenses (including conference travel) for diversity and first-generation students

• **Biosciences Travel Grant Program** – defray conference fees including registration, travel, lodging, and food

• **Student Budget** – provides estimated expenses

• **Bechtel** – provides information on on-campus employment, CPT, OPT, internships and tax information for international students

• **Student Financial Services** – provides information about the bill, tax information, third party sponsor invoicing, etc.

• **Mind Over Money** – free online literacy tool

• **School of Humanities & Sciences website** – information about graduate awards & fellowships

• **VPGE** – provides information about graduate fellowships

• **Gateway to Financial Activities** – provides administrative resources (e.g., sign-up for direct deposit, tax treaty information)
FAQs and Available Resources

Choosing Labs for Rotations and Thesis Research
First-year students will rotate in 3 labs (one each quarter) so that by June of their first year they can choose their thesis lab. At least two of these rotations should be Immunology labs and the third may be in lab from another Bioscience program. In some cases, students may wish to do a fourth rotation in the summer of their first year before choosing a lab.

Students should consult with Dr. Olivia Martinez before confirming any rotations. Incoming students should confer with Dr. Martinez before arranging Autumn quarter rotations. It is recommended that students consider multiple PI’s for rotation experiences. Rotations generally start and end with a given quarter but don’t have to match up exactly. Enough time should be spent in the lab to (1) get a real sense of fit, and (2) learn new techniques. Students do not need to stay the whole quarter if a rotation isn’t working out and should speak with Dr. Martinez if they would like to end a rotation early.

Rotation Evaluations – Students are expected to provide a rotation evaluation at the end of each quarter. Evaluation forms are available here via the program’s site: https://med.stanford.edu/immunol/phd-program/resources.html.

You can find information about our faculty's research interests on the faculty directory page. For more advice, consult the Stanford Biosciences guide to Choosing Rotations and a Thesis Lab.

FAQs

1. How do you find a lab to rotate in?
   The first step is to identify faculty members and labs where the research is of interest to you. You can find information on Immunology Faculty members and their research interests at the end of this Handbook and at: https://med.stanford.edu/immunol/people/faculty.html. It is a good idea to identify 3-5 labs of interest as soon as possible. Current graduate students are a good source of information about the research interests and styles of individual labs. Opportunities will be provided during the fall for you to meet faculty, including research talks at the Immunology retreat, and lunch talks with faculty. You are encouraged to explore many options for lab rotations. Finally, you can contact members of the Graduate Program Committee or Dr. Martinez if you need guidance in identifying or choosing a lab to rotate in.

2. When and how do you ask a faculty member if you can rotate in their lab?
   It’s easiest to email the Faculty member, tell them you are interested in rotating in their lab, and ask if they are taking rotation students. If so, arrange to meet with the Faculty member to discuss a potential rotation. At the meeting, you should discuss why you are interested in the lab and possible rotation projects. If you haven’t already arranged your first rotation when you arrive for Orientation, you should start the process immediately. To arrange rotations for winter and spring quarters it is best to begin talking to faculty members about rotating by week 8 or 9 of the prior Quarter. Incoming students should confer with Dr. Martinez prior to arranging Autumn rotations.
3. **What should you expect to accomplish in your rotation?**
   The lab rotation is a chance to get familiar with the lab and to help you determine if it is a good fit for you. During your rotation, you should plan to spend most of the time that you are not in class, in the lab. If you do this, by the end of the Quarter you will have a good sense of the research going on in the lab and thesis projects you might be interested in as well as the culture and dynamics of the lab, and the mentorship style of the Faculty member. These are all important aspects of helping you chose a lab. As a guideline, you are expected to make sufficient progress on your rotation project to give a 15-minute presentation to the Graduate Program Committee on your rotation research –you will be asked to present the work from one of your rotations to the Graduate Program Committee in June. Your rotation advisor will also expect you to present your work to the lab at the end of your rotation.

4. **How many rotations should you do?**
   We require students to rotate in three labs (one each quarter) so that by June of their first year they are ready to choose a lab for their dissertation research. At least two of these rotations should be in Immunology labs. In some cases, students may wish to do a fourth rotation in the summer of their first year before choosing a lab.

5. **What if you know the lab you are rotating in isn’t for you?**
   Sometimes you know immediately that the lab just isn’t a right fit for you and that is okay. In this case, it is important to advise Dr. Olivia Martinez and look for a new rotation. Rotations are for you to find the lab that is the best fit for you.

**Rotation advice:**
- Set up your rotations as early as possible.
- Talk to as many faculty (principal investigators, PIs) as possible, both about their work and the work of other potential labs.
- Attend multiple lab meetings in various labs of interest. This allows you to see the culture of the lab without committing to a full rotation. Also, you will be able to see the current status and future directions of many projects in the lab. Lab meetings are the best place to get the most current scoop on the PI’s research.
- Talk to other students in the program about lab options.
- Don’t be afraid to expose yourself to new and different areas of immunology that may appeal to you.

**Advice on choosing a thesis lab**
Your thesis lab is where you’ll be spending a lot of time over the next few years, so do your best to find a place that feels comfortable for you. Important components of finding a good fit include the mentorship style of the PI and the scientific questions being addressed in the lab. Gain information by talking to as many current and former lab members, other students, and PIs to get information about a lab.

**Typical questions to ask others and yourself when choosing a lab include:**
- What is the PI’s mentoring style? PI’s philosophy in dealing with people and publishing papers?
- How does the PI choose and distribute projects among lab members, and the role the student plays in decision-making?
- How much time does the PI spend with lab members?
- How much time is the PI away from the lab for travel?
- Does the PI help his/her people get good postdoc positions/jobs? Does s/he give career advice? Where and what type of positions have lab alumni obtained?
- How does the PI handle collaborations?
- What is the student: postdoc ratio? Few students and many postdocs have a different feel than many students and few post docs.
- What the lab’s publication record, especially for graduate students? Have there been authorship conflicts? If so, why?
- How supportive is the PI of lifestyle choices (spouse, children, and other important non-lab commitments)?
- Are the people in the lab happy? Do they get along well and work together?
- How many hours do people work in the lab?
- What is the financial situation of the lab?
- What is the average time to completing a PhD degree in the lab?

Requirements for Second Year
- Students must complete all core course requirements by the end of their second year; the student’s dissertation committee is responsible for advising the student through the research and other courses as needed towards the completion of the PhD dissertation. Elective courses are agreed upon by the student, advisor, PhD Program Director, and dissertation committee. These courses may be chosen from graduate courses and seminars in any of the biomedical science departments and programs. *(Elective courses not taken on the list)*
- Graduate students beyond the first year are required to attend at least 50% of the Immunology Seminars each quarter.
- Students looking into TAing during their second year should refer to the Teaching Assistantships section.

Teaching Assistantships
Teaching experience and training are part of the graduate curriculum. Each student assists in teaching two courses in the immunology core or electives. A TA match process is held in summer quarter in order to match the graduate student’s research and teaching preferences to the appropriate courses. Before beginning their assigned teaching assistantships, students are required to attend a TA orientation workshop held by VPTL before the teaching quarter begins. Students are required to TA one core course (Adv Imm 201, 202, 203) or Bio 230 in addition to one of the other courses listed below.

TA selection/matching process:
1. The Chair of the Immunology Graduate Program Committee reviews both sets of applications and selects and matches the students to the appropriate courses based on the following criteria:
   a. Completion of the CTL teaching assistantship orientation, through workshop or online course
   b. Faculty need
   c. Students’ ranked preferences
2. TAships must be completed in 2nd through 4th years of graduate student. The fifth year will be dedicated mainly to completing PhD research and submitting a required first author publication.
3. Results of the TA match system will be announced in August for students and their PhD advisors, and the course directors.

**Teaching Assistantships are available for the following courses:**
- Immunology Startup (3)
- Bio 230 and Bio 230A: Molecular and Cellular Immunology (4)
- Immunol 201: Advanced Immunology I (2)
- Immunol 202: Advanced Immunology II (2)
- Immunol 203: Advanced Immunology III (2)
- Immunol 205: Immunology in Health and Disease, required course for medical students (6-7)
- Immunol 206: Introduction to Applied Tools in Computational and Systems Immunology (1)
- Immunol 207: Essential Methods in Computational and Systems Immunology (1)
- Immunol 209: Translational Immunology (1)
- Immunol 223: Biology and Disease of Hematopoiesis (1)
- Immunol 275: Tumor Immunology (2)
- Immunol 305: Immunology Journal Club (3 total, 1 TA per quarter)
- Immunol 310: Seminars in Computational and Systems Immunology (2)
- Immunol 311: Seminars in Immunology (1)

**The McDevitt Prize**
The Hugh McDevitt Prize recognizes and awards a graduating PhD candidate in the Immunology Program for excellence in his or her doctoral dissertation research. The McDevitt Prize Award winner is chosen from a group of candidates who have defended and submitted their thesis to the Registrar in a given academic year. The criteria for selection are that the candidate's doctoral research is judged by the Graduate Program Committee to be of the highest quality in immunological research. The winner is announced at the annual Scientific Conference in Asilomar or at the Immunology Holiday Party. He or she will receive a certificate and $1,000 honorarium.

**Leadership Opportunities**
The Immunology Program encourages student involvement and feedback to improve the quality of academic and social experiences. The following positions are held by students, and elections are held annually at the last Journal Club meeting before the summer term. This year’s leadership group is as follows:

- Student Director for Immunology Seminars: Geoffrey Ivison
- Student Representative to the Executive Committee: Amy Fan
- Student Representatives to the Graduate Program Committee: Ariel Calderon
- Student Representative to the Admissions Committee: Miles Linde and Julia McKechnie
- First-year Advising Committee: Bryan Cannon and Lilit Grigoryan
- Biosciences Admissions Week: Josselyn Pena and Brenda Velasco

**Program Activities/Events**
Visit the Immunology Program Seminars & Events page for updated schedules and speakers: [https://med.stanford.edu/immunol/seminars-events.html](https://med.stanford.edu/immunol/seminars-events.html)

**Immunology and CSI Seminar Series**
Graduate seminars are held on Tuesdays at 4:30-5:30pm and are an important means of attaining a broad and comprehensive exposure to all areas in immunology as well as gaining a professional perspective and competence in the field. First-year students are required to attend all immunology seminars (IMMUNOL 311 Seminar in Immunology). Students in their second year and above are required to attend 50% of the seminar series each academic year until the last quarter in which their Ph.D. oral defense takes place. Students in the CSI track are required to attend the Computational and Systems Immunology Seminar Series (IMMUNOL 310 Seminars in Computational and Systems Immunology) held every Summer Quarter.

**Science-in-Progress Talks (SIP):** The SIP format features research presentations by both senior graduate students and postdoctoral fellows to the immunology community. The purpose of a Science-in-Progress talk is to gain more practice in presentation skills, to present your work to the immunology community, and to get useful feedback on both your presentation and your work. The SIP Talks are scheduled from Autumn quarter 2019 through Spring quarter 2020 and are held on Thursdays at 12:30-1:30pm. Students are required to present one SIP prior to graduation.

**Graduate Student Journal Club:** Both MCTI and CSI students are required to attend the IMMUNOL 305 Immunology Journal Club for their first through third years. Attendance is optional for fourth year and above graduate students. Journal Clubs are held Tuesdays at 3:00-4:00 pm during the Autumn/Spring quarters and 10:30-11:30 am during the Winter quarter to gain practice in oral presentation skills and to learn to present and fairly critique a published paper in some area of immunology.

**Faculty Research Presentations:** Faculty teaching in the Immunology Program have the opportunity to meet and talk to First Years about their lab’s research. The meetings are helpful in the cohort’s search for rotation labs. The meetings are held on Thursdays at 12:30-1:30pm during the Fall and Winter Quarters.

**Stanford Immunology Summer Barbeque:** The Summer Barbeque is held in late June or early July of each year. It is traditionally organized by First Year students and is attended by graduate students, post-docs, faculty and staff of Stanford Immunology.

**Annual Immunology Scientific Conference:** In the Autumn Quarter, the Annual Scientific Conference is held on the California coast at the Asilomar Conference Center in Pacific Grove, CA, and is attended by students, staff, postdocs and program faculty of Stanford Immunology. All immunology graduate students are required to attend. Students are required to give one poster and one scientific presentation at Asilomar during their years in the program.
**Graduate Student Life and Services**

**Vacation Policy**
The Immunology Ph.D. program is a year-round program, and graduate students work on projects for which there is an expectation of and commitment to continuous effort. Graduate students are allowed 15 days of vacation time per year (not including Christmas and New Year’s Day). Generally, only a portion is used during Winter Closure. Mutually acceptable arrangements should be made in advance for the coverage of any critical functions and/or leaves in excess of this allocation. Leaves in excess of this allocation may be with an adjustment in financial support.

First Year students must check with Dr. Olivia Martinez before making travel arrangements and **should not plan vacation during Rotation Presentations in June**. Second year and above students must have permission from their PI to take vacation. Students should plan their personal vacation carefully. It is not advised to travel during the quarter if you are taking courses.

**Personal Support Services**
Dr. Olivia Martinez is available to discuss personal concerns of students, and to recommend further conversations with the Advising Deans and/or one of the organizations or services below.

**School of Medicine Office of Graduate Education**
Shelly Rasnick, MPH, CHES
Associate Director for Biosciences Student Life and Wellness
650.725.0537
srasnick@stanford.edu

The Office of Graduate Education (OGE) supports wellness and student life focused initiatives within OGE that meet the needs of diverse PhD and master’s students in the biosciences community. Contact Shelly on topics including student engagement, resources, and supporting holistic wellness through education and strategic planning.

**Graduate Life Office (GLO)**
http://glo.stanford.edu/
(650) 736-7078 for appointments
(650) 723-8222 Ext. 25085 for 24/7 crisis assistance

The Graduate Life Office (GLO), a unit in the Student Affairs division, is here for you as a source of comprehensive and impartial guidance and information about all aspects of life as a graduate student. We can help you with many personal, academic, and financial issues, or direct you to someone who can.

**Counseling and Psychological Services (CAPS)**
https://vaden.stanford.edu/caps
(650)723-3785

CAPS offers crisis counseling for urgent needs. Walk-in appointments are available. Clinicians are always on call, even during evenings and weekends.
**Biosciences Peer Mentors (BioPeers)**

https://biosciences.stanford.edu/contact/biosciences-peer-mentors-biopeers/

The Biosciences Peer Mentors (BioPeers) provide free and private peer-to-peer support for the Biosciences graduate student community. BioPeers are graduate students in their second year or higher who have volunteered to help their peers cope with the feelings of stress, inadequacy, or uncertainty that are often experienced during graduate school. BioPeers are trained to provide nonjudgmental support through listening, informal counseling techniques, and campus and community referrals.

If you'd like to talk to a peer mentor, you can contact one of us directly via email, or use the Contact the BioPeers form.

**Wellness and Health Promotion Services (HPS)**

Stanford University has a Wellness Network, https://biosciences.stanford.edu/current-students/resources/health-and-wellness-resources/, that provides links to all university resources on wellness. Students with any issues relating to psychological and physical health can find links to resources for immediate or longer-term assistance.

HPS helps students to make informed, healthy decisions about their lifestyle and behavior through education and support. Areas of expertise include alcohol, tobacco, and other drug use; nutrition, weight management, body image and eating disorders, sexual assault and harassment; sexual health, relationships, intimacy, and gender issues.

Services include individual preventive counseling and resource referral, speakers, programs, events and workshops at student residences, community centers, student organizations, and for new students. HPS also trains student volunteers and sponsors a variety of health outreach projects and events. Most services are free. Please call (650) 723-0821 for further information.

**University Ombudsperson**

David Rasch, Stanford University Ombuds Mariposa House
585 Capistrano Way, Room 210
(650) 723-3682
rasch@stanford.edu
http://www.stanford.edu/dept/ombuds/

The Ombudsperson’s task is to protect the interests and rights of members of the Stanford community from injustices or abuses of discretion, from gross inefficiency, from unnecessary delay and complication in the administration of University rules and regulations, and from inconsistency, unfairness, unresponsiveness, and prejudice in the individual’s experience with University activities. The Ombudsperson’s office exists to receive, examine, and channel the complaints and grievances of members of the Stanford community, and to secure expeditious and impartial redress.

Any troublesome matter in the University community may be discussed in confidence with the University Ombuds. Services of the office are available to students, staff, and faculty. Although possessing no decision-making authority, the Ombuds has wide powers of inquiry. The Ombuds can refer matters to the proper person or office expeditiously and also provides conflict resolution services.
The Bridge Peer Counseling Center  
581 Capistrano Way  
(650) 723-3392 (24 hours a day)  
https://web.stanford.edu/group/bridge/

The Bridge is a group of trained student counselors providing free, confidential, 24-hour peer counseling services to Stanford and the neighboring community. As peer counselors, they are there to listen, to explore feelings or just to talk. Their goal is to help you to develop your own solutions to problems or uncertainties that you may be dealing with. All services are free and confidential.

During the academic year, The Bridge takes calls 24 hours a day by phone and is open for drop-in visitors from 9 a.m. to 12 a.m. midnight. The schedule may vary when classes are not in session.

The Office for Religious Life  
(650) 723-1762  
https://religiouslife.stanford.edu/

The office offers spiritual guidance, multi-faith worship, and community for students. Call or visit the Round Room at Memorial Church.

Disabilities: Office of Accessible Education (OAE)  
The Office of Accessible Education (OAE) is the campus office designated to work with Stanford students with disabilities, at both the undergraduate and graduate levels (including the professional schools).

https://oae.stanford.edu/students

The OAE provides a wide array of support services, accommodations, and programs to remove barriers to full participation in the life of the university. Working collaboratively, the student and OAE staff members develop and implement an accommodation plan tailored to the student’s disability-related needs. Accommodations include, but are not limited to:

- Note taking  
- Oral or sign language interpretation  
- Steno captioning  
- Examination accommodations  
- Modifications in course load  
- Braille embossing  
- Electronic text (e-text) Housing accommodations  
- Students with disabilities for which they may need accommodations should call and register with the OAE as soon as possible by phoning the main office at (650) 723-1066.  
- Each student bears the responsibility of initiating a disability-related request for accommodations with the OAE prior to the time such an accommodation is needed. In addition, it is the responsibility of the student to: as early as possible register with the OAE and submit documentation of disability as a prerequisite to receiving accommodation, and to notify the OAE immediately if an accommodation is not being provided correctly or in a timely fashion.
Stanford Access - Stanford Access offers complimentary curb-to-curb service to all eligible
students, faculty, or staff with a disability or medical condition. For more information on
hours of operation and how to arrange for on-campus rides, please visit our website:
https://transportation.stanford.edu/maps-resources-and-access/stanford-access

Schwab Learning Center - Through a generous endowment from Charles and Helen Schwab,
the Schwab Learning Center (SLC) was established to provide Stanford students with
Learning Disabilities and Attention Deficit Hyperactivity Disorder (ADHD) a supportive
academic environment through enhanced programs and service. SLC programs and services
are offered on both the main campus and at the Stanford School of Medicine. Among the
services offered are:

- Consultation and referral for students with suspected learning differences
- One-on-one learning strategies
- Academic tutoring

Assistive Technology - The OAE provides trainings and screenings on a variety of assistive
computer technologies and software applications. Screenings create an opportunity for
students and the OAE staff to review and discuss various assistive technologies and software
applications that may prove useful. Services include:

- One-on-one training for assistive technology and adaptive software
- Software for speech recognition, text-to-speech applications, screen readers and
  screen magnification. Alternative input devices such as specialized keyboards and
  mouse substitutes
- Whiteboards capture devices to enhance studying
- Ergonomic computer workstations
- Refreshable Braille display
- CCTV video magnifiers
- The Alternate Format Production Facility has the capacity to convert print text to
electronic text (e-text), large print, or Braille using high-speed scanners, specialized
  software applications, and Braille embossers.

For more information, visit our website: https://oae.stanford.edu/assessment-training

Voice: (650) 723-1066
FAX: (650) 723-5301
Email: oae-getinfo@lists.stanford.edu URL: http://studentaffairs.stanford.edu/oae
Address: 563 Salvatierra Walk, Stanford, CA 94305

Sexual Violence Support & Resources
Vaden Health Center offers several services for students who experience sexual assault or
relationship violence on or off campus (http://vaden.stanford.edu/sexual-assault). For a full
listing of resources, please consult: https://notalone.stanford.edu/. For life-threatening
emergencies, call 911 or go to the nearest hospital. For non-emergency assistance, call
Stanford’s Sexual Assault Hotline **650-725-9955**. A confidential counselor is available 24/7
to help you navigate your options.

Both the Sexual Assault and Relationship Abuse Office (SARA) or the Title IX Office can
answer questions about available resources, Stanford processes, and reporting options. The
Title IX Office has a staff member specifically dedicated to meeting with students seeking
information about their options. Seeking consultation does not require making a report or initiating a formal process. Both offices can assist with making a police report.

Contact the SARA Office: saraoffice@stanford.edu or (650) 725-1056
Contact the Title IX Office: titleix@stanford.edu or (650) 497-4955

Students can contact Dr. Olivia Martinez in person, via email or phone if he/she has experienced prohibited conduct.

Health Care
While at Stanford, your health care resources include the following:

- Access to Vaden Health Center – All students can access Vaden Health Center services during their academic careers at Stanford. As a member of the Stanford campus community all services are geared to your well-being. Vaden Health Center services include primary care, counseling and psychological services, radiology, lab, pharmacy, physical therapy and nutrition.
- Insurance – You will need health insurance when accessing health care outside of Vaden. Examples of services that require health insurance are referrals to specialists, inpatient care, emergency care, and services while away from campus (such as when traveling within the US or internationally).

Cardinal Care is a comprehensive health plan specifically designed for Stanford students. Coverage is worldwide. It includes medical, surgical, mental health care, hospitalization, emergency care and pharmaceuticals. Cardinal Care is administered and insured by Health Net of California (for medical benefits) and MHN (for mental health benefits). The 2019-2020 Cardinal Care health plan offers dental coverage. You can learn more about Stanford Health Care at: https://vaden.stanford.edu/.

Note: After you defend and submit your thesis, you must inform the Vaden Health Center that you wish to cancel your health insurance for the following quarter. If you do not do this, Vaden Health Center will automatically bill your student account and you will be expected to cover it. Please be sure to email healthinsurance@stanford.edu to inform them of your last quarter at Stanford.

Student Organizations
Students are encouraged to be involved in organizations that work to build community in and between specific groups at Stanford.

Stanford Biosciences Association (SBSA) is an organization created by graduate students enrolled in the Biosciences programs. SBSA organizes seminars, career fairs and other meetings that address areas of particular interest to graduate students. This student-led organization has sponsored presentations on employment opportunities and trends in academia as well as in business. SBSA hosts an array of social gatherings, from ski trips to barbeques – all designed to bring graduate students together in relaxed and informal surroundings. Visit http://med.stanford.edu/sbsa.html for more information.
**Biomedical Association in the Interest of Minority Students (BioAIMS)** is an organization that aims to provide a welcoming environment and a platform from which graduate students of multiple backgrounds and identities can share their unique perspectives and experiences. Furthermore, they work to promote student diversity at Stanford with particular emphasis on the recruitment, retention and well-being of underrepresented minorities (URMs) in the sciences. BioAIMS has organized retreats for team-building and networking (Biosciences and Genetics Diversity Retreat) and held events that allowed students to explore job opportunities in the public and private sectors with regard to policy (Diversifying Academia and Beyond Career Development Trip). Visit [https://www.bioaims.com/](https://www.bioaims.com/) for more information.

**School of Medicine Diversity Center Of Representation and Empowerment (D-CORE)** a space where any member of the Stanford Medicine community interested in issues of inclusion and diversity can hold meetings or just hang out and study. Visit [http://med.stanford.edu/diversity/d-core.html](http://med.stanford.edu/diversity/d-core.html) for more information.

**Graduate Student Council (GSC)** is the student government for Stanford graduate students. The GSC hosts various events and represents student needs through advocacy. Visit [https://assu.stanford.edu/gsc](https://assu.stanford.edu/gsc) for more information.

**Lesbian, Gay, Bisexual, & Transgender Medical Education Research Group (LGBT MERG)** changes the face of medical education to improve care for lesbian, gay, bisexual, and transgender patients. Explore the website for more information: [http://med.stanford.edu/lgbt.html](http://med.stanford.edu/lgbt.html).

For more diversity resources and organizations at Stanford, visit the Diversity Resources and Partnerships page.

**Student Housing**

Graduate students live in various apartment communities:

- Escondido Village – Apartments on eastside of campus - largest graduate community on campus
- Escondido South – Townhouses
- Rains Houses – Apartments
- Munger Graduate Residences – Apartments – priority given to Law School students
- Off-campus subsidized – Apartment complexes in Menlo Park, Mountain View and Palo Alto.

Couples housing and housing for students with children is also available. Housing applications for Autumn Quarter are due in the spring prior. For information on student housing, please visit the Student Housing website: [http://www.stanford.edu/dept/rde/cgi-bin/drupal/housing/](http://www.stanford.edu/dept/rde/cgi-bin/drupal/housing/).

Housing rents and fees will be deducted directly from a fellowship stipend at the beginning of every quarter. If you are paid bi-weekly and wish to deduct a monthly amount directly from your check, please contact the Student Services Center (Tressider) to set up this arrangement.

**Career Advice**
There is a broad network of career services across the University. Here are some key resources:

- **BioSci Careers** ([http://bioscicareers.stanford.edu](http://bioscicareers.stanford.edu)) provides counseling/coaching, curriculum, and connections to more than 3,000 trainees in the medical and life sciences. Visit them in MSOB, 1st floor or call 650-721-1893 to set an appointment.

- **Bridging Education, Ambition & Meaningful Work (BEAM)** ([https://beam.stanford.edu/](https://beam.stanford.edu/)) is a part of Student Affairs and is the student career education hub that connects students with the people and knowledge needed to help them explore career paths, identify and apply for opportunities, and cultivate personalized networks that shape their professional journey. The office is available M-F, 8am-5pm at the Student Services Building, or at 650-725-1789.

- **Office of the Vice Provost for Graduate Education (VPGE)** ([https://vpge.stanford.edu/](https://vpge.stanford.edu/)) offers programs in professional development to graduate students within all seven Schools. There's something to meet any graduate student's needs and schedule, from information-packed Quick Bytes lunches, to multi-session Negotiation Matters workshops, or week-long Stanford Graduate Summer Institute courses. Browse these offerings and sign up for those that interest you. The hours are M-F, 8:30am-5pm in 450 Serra Mall, Building 310 or 650-736-0775.

### Immunology E-mail Lists

Once admitted, students are automatically added to the program's PhD ([Immuno-program](https://vpge.stanford.edu/)) and Immunology ([stanfordimmunology](https://itservices.stanford.edu/service/mailinglists/tools)) e-mail lists. Students interested in subscribing to other e-mail lists at Stanford for general announcements may do so by going to [https://itservices.stanford.edu/service/mailinglists/tools](https://itservices.stanford.edu/service/mailinglists/tools) and searching for and selecting the link.

These are open and public lists meant to be used for electronic communications. Normal network etiquette and policies should be observed (e.g. no advertisements, no chain letters, etc.). Specific University guidelines can be found here: [https://uit.stanford.edu/service/mailinglists/policies](https://uit.stanford.edu/service/mailinglists/policies).

Program Faculty

Program faculty have strong records as researchers, including publications and successful research. Our faculty have diverse backgrounds and have a record of research training who have mentored and helped develop successful, former trainees who have established productive careers. Faculty serve on committees, teach major courses, directly mentor students, and provide core support essential to the functioning of the Immunology Program. The program is proud to have 91 Faculty members in total, 11 National Academy of the Sciences members, and 1 Nobel Laureate.

Immunology PhD Program Faculty are affiliated with the following departments, divisions, and institutes:

**Departments:**
- Biology
- Biochemistry
- Bioengineering
- Biomedical Data Sciences
- Biostatistics
- Biophysics
- Chemical & Systems Biology
- Chemistry
- Computer Science
- Developmental Biology
- Genetics
- Health Research & Policy
- Infectious Diseases and Geographic Medicine
- Microbiology & Immunology
- Molecular and Cellular Physiology
- Neurology and Neurological Sciences
- Neurosurgery
- Otolaryngology
- Pathology
- Psychiatry & Behavioral Sciences
- Structural Biology
- Surgery
- Urology

**Department of Medicine/Divisions:**
- Blood & Marrow Transplantation
- Cardiovascular Medicine
- Endocrinology
- Gastroenterology & Hepatology
- Hematology
- Nephrology
- Oncology
- Immunology & Rheumatology
- Infectious Disease
Radiology

Department of Pediatrics/Divisions:
Human Gene Therapy
Immunology and Allergy
Infectious Diseases
Neonatology
Stem Cell and Regenerative Medicine Systems Medicine

Institutes:
Stanford Cancer Institute
Stanford Institute for Stem Cell Biology and Regenerative Medicine
Stanford Institute for Immunity, Transplantation and Infection

Stanford Institute for NeuroInnovation and Translational Neuroscience

PhD Faculty Profiles and Contact Information
For more detailed information on each of the following faculty members, please visit their Stanford Community Academic Profile (http://med.stanford.edu/profiles/) or go to the faculty directory on the Immunology website (http://med.stanford.edu/immunol/people/faculty.html).

Our Immunology program faculty are UTL (University Tenure Line and on the Academic Council), NTL-R, (Non-Tenure Line, Research and on the Academic Council), or MCL (Medical Clinical Line and non-Academic Council). MCL faculty primarily have clinical responsibilities and may or may not be eligible to act as graduate student advisors. Students seeking to include MCL faculty as members of their thesis committees must first obtain approval from the Director of the Graduate Program, Dr. Olivia Martinez.
