

---

**CURRICULUM VITAE**

**Name:** Terence David Sanger

**Address:** Stanford Medical Center Dept. Neurology and Neurological Sciences, 300 Pasteur Drive  
Rm A347, Stanford, California 94305-5235; (650)736-2154, fax-(650)725-7459, sanger@stanford.edu

**Current position:** Associate Professor, Stanford University Department of Neurology and Neurological Sciences.

**A. ACADEMIC HISTORY**

**Education:**

**1985** A.B. Harvard College Department of Applied Mathematics

**1986** M.S. Harvard University Department of Applied Mathematics

**1993** M.D. Harvard Medical School Division of Health Sciences and Technology

**1993** Ph.D. Massachusetts Institute of Technology Department of Electrical Engineering and Computer Science. Thesis: "Theoretical Elements of Hierarchical Control in Vertebrate Motor Systems"

**Scholarships and Honors:**

**1981** Westinghouse Science Talent Search 6th place winner.

**1985** Highest departmental honors in Applied Mathematics, and *Magna Cum Laude* honors from Harvard College.

**1985** Hoopes Prize for undergraduate thesis.

**1985** National Science Foundation Graduate Fellowship.

**1988** Medical Scientist Training Program Fellowship.

**1990** National Defense Science and Engineering Fellowship.

**Post-doctoral and Residency Training:**

**Internship and Residencies:**

**1993-1994** Intern in Pediatrics, USC/Los Angeles County Medical Center, Los Angeles

**1995** Resident in Pediatrics, USC/Los Angeles County Medical Center, Los Angeles

**1995-1996** Part-time clinical fellow, Children's Hospital Department of Neurology, Boston

**1996-1999** Resident, Children's Hospital Department of Neurology, Boston

**1999-2000** Fellow, Movement Disorders Unit, Toronto Western Hospital, Toronto

**Post-doctoral Research Fellowships:**

**1993-1995** Research Staff, NASA Jet Propulsion Laboratory, with Jacob Barhen

**1995-1996** Post-doctoral Research Fellow, MIT, with Emilio Bizzi

**Licensure and Certification:**

**1995** Massachusetts Board of Registration in Medicine (80801)

**1995** California Medical Board (G080612)

**1995** U.S. Drug Enforcement Administration

**1994** Pediatric Advanced Life Support, Los Angeles County Hospital

**1996** Advanced Cardiac Life Support, Massachusetts General Hospital

**1996** Advanced Trauma Life Support, Massachusetts General Hospital

**2000** National Board of Medical Examiners Certification in Neurology with Special Competence in Child Neurology

**Languages:**

**French:** 5 years study

**Italian:** 3 years study

**Spanish:** 2 years study

**Funding:****Current:**

**UCP Pilot Grant** active. United Cerebral Palsy Research and Education Foundation, 8/1/07-7/31/09, "Reflex contributions to abnormal movement in dyskinetic cerebral palsy." Role: PI. The major goal of this project is to determine the contribution of short-latency and long-latency abnormal reflexes to disturbances of voluntary reaching in children with CP.

**R01 NS052236** active. NIH/NINDS, 7/15/06-4/15/11, including diversity supplement 03/01/08 - 02/28/10, "Failure of Motor Learning in Childhood Dystonia." Role: PI. The major goal of this project is to investigate the sensory and motor mechanisms that prevent children with dystonia from improving their performance through practice.

**U13 NS043180, NS061384** active. NIH/NINDS/NICHHD, 9/1/02-8/31/08, "NIH task force on childhood motor disorders." Role: PI. The major goal of this project is to fund ongoing meetings of a task force to provide consensus definitions and propose candidate rating scales for assessment of children with motor disorders.

**Unrestricted Educational Grant** active. Allergan, Inc., 3/1/2001-continuing, "NIH task force on childhood motor disorders." Role: PI. The major goal of this project is to fund ongoing meetings of a task force to provide consensus definitions and propose candidate rating scales for assessment of children with motor disorders.

**Investigator-initiated clinical research** active. Carter Foundations, 8/1/01 - continuing, "Working Group on Childhood Motor Disorders." Role: PI. The major goal of this project is to investigate, in detail, the complete set of motor impairments that lead to disabilities in a small number of children with severe movement disorders.

**Pending:**

**R01 NS064046** pending (submitted 2/5/08). NIH/NINDS, 10/1/08-9/30/13, "Optimizing communication devices for children with dyskinetic cerebral palsy." Role: PI. The major goal of this project is to investigate the relationship between motor performance and the information-theoretic concept of channel capacity in children with secondary dystonia who use assistive communication devices.

**Completed:**

**Child Health Research Program Pilot Grant** completed. Lucile Packard Children's Hospital, 4/1/07-3/31/08, "Advanced Statistical Methods for Biofeedback in Children with Dyskinetic Cerebral Palsy." Role: PI. The major goal of this project is to perform preliminary clinical testing of a new biofeedback sensor and nonlinear signal processing algorithm that I have developed.

**R13 NS055614** completed. NIH/NINDS, 4/1/06-3/31/07, "Neural Control of Abnormal Movement." Role: PI. The major goal of this project is to support the organization of a satellite meeting to the Neural Control of Movement society meeting in order to encourage participation of clinicians and clinical investigators and collaboration between clinical and basic science investigators.

**K23 NS41243** completed. NIH/NINDS, 6/1/01-5/31/06, "Arm kinematics in hyperkinetic cerebral palsy." Role: PI. The major goal of this project is to determine whether hyperkinetic arm movements are due to noise in the motor system or to a limitation of voluntary movement.

**Investigator-initiated clinical research** completed. Elan Pharmaceuticals, Inc., 4/1/02-3/30/05, "Does Myobloc improve functional hand use in young children with a hypertonic upper extremity." Role: PI. The major goal of this project is to test whether a series of three escalating doses injections of Myobloc in the biceps and brachioradialis of children age 2-6 years old with restriction of arm movement due to increased tone in the arm flexor muscles can improve functional reaching.

**R21 NS045638** completed. NIH/NINDS, 4/1/03-3/31/05, "Childhood motor impairment and assisted communication." Role: PI. The major goal of this project is to investigate the relationship between measures of upper-extremity motor function and the design of optimal communication interfaces for children with motor disorders.

**Investigator-initiated clinical research** completed. United Cerebral Palsy Foundation, 2/1/02-1/31/05, "Cerebral Hypertonia of Central origin an Open-Label trial of Anticholinergic Treatment Effects." Role: PI. The major goal of this project is to test

whether there is an improvement in upper-extremity function in children with dystonia treated with an escalating dose of oral trihexyphenidyl. This is a multi-center trial performed as lead site of the Childhood Motor Study Group.

**Pfizer Scholars Grant** completed. Pfizer Pharmaceuticals Group, 7/1/01-6/30/02, "A Virtual-reality Training Environment for the Treatment of Pediatric Dystonia." Role: PI. The major goal of this project is to develop the hardware and software for an interactive environment that can be used to test the ability to retrain arm movements in children with upper extremity dystonia and improve their quality of reaching.

## B. EMPLOYMENT HISTORY

**1993-1994** Intern in Pediatrics, USC/Los Angeles County Medical Center, Los Angeles.

**1993-1994** Research Staff, NASA Jet Propulsion Laboratory, Pasadena.

**1995** Resident in Pediatrics, USC/Los Angeles County Medical Center, Los Angeles.

**1995-1996** Clinical fellow, Children's Hospital Department of Neurology, Boston.

**1995-1996** Postdoctoral Research Assistant, MIT, Boston.

**1996-1999** Resident, Children's Hospital Department of Neurology, Boston.

**1999-2000** Clinical Fellow, Movement Disorders Unit, Toronto Western Hospital.

**7/1/2000-8/31/2008** Assistant Professor, Neurology and Neurological Sciences, Stanford University.

**9/1/2008-present** Associate Professor, Neurology and Neurological Sciences, Stanford University.

## C. PUBLIC AND PROFESSIONAL SERVICE

### Professional groups:

- Childhood Motor Study Group (CMSG), co-director and principal investigator
- NIH Taskforce on Childhood Motor Disorders, principal investigator
- Child Neurology Society - Movement Disorders Special Interest Group
- Dystonia Medical Research Foundation - Scientific Advisory Board
- Neural Control of Movement Society - Executive Committee, Secretary
- Journal of Motor Behavior - Consulting Editor

### Consulting:

- StemCells, Inc.

### Teaching:

- NENS220, "Computational Neuroscience", co-instructor with John Huguenard 2003, 2005, 2007

- ME281, “Biomechanics of Movement”, co-instructor with Scott Delp, 2002.
- NSADA program for teaching translational research in Child Neurology, co-director 2004-present
- Psychology 202, invited lecturer 2001, 2003, 2005, 2006, 2007
- Neuro 205, invited lecturer 2003, 2004
- BioDesign program ”Bootcamp” director, 2003-2004.
- NENS299 “Computational Neural Networks”, 2003
- resident and medical student teaching

### Meeting Organization:

- 1995** “Neuroscience and Neural Networks”, workshop at Neural Information Processing Systems meeting, co-organizer.
- 1998** “Computational Motor Control”, satellite to NCM meeting. co-organizer.
- 2000** “Computational Motor Control”, satellite to NCM meeting. co-organizer.
- 2000** “Diagnosis of Hypertonia in Children”, symposium, Toronto. co-organizer.
- 2001-2006** “Taskforce on Childhood Motor Disorders”. organizer and PI.
- 2006** “Neural Control of Abnormal Movement”, satellite to NCM meeting. co-organizer.

### Peer Review Panels:

1. Musculoskeletal Rehabilitation Study Group (MRS) *ad hoc* 2006
2. Function, Integration, and Rehabilitation Sciences Subcommittee (FIRS) *standing* 2006-2010
3. Child Neurology Foundation *ad hoc* 2004
4. Dystonia Medical Research Foundation *standing* 2005-2008
5. Neural Control of Movement Society 2004-*continuing*

### Editorial Boards:

1. *Movement Disorders* Journal
2. *Human Movement Science* Journal

### Committees:

1. Neuroscience Institute at Stanford, Director of working group on child motor disorders, 2004-2006.
2. NSADA Planning and Direction, 2003-2006.
3. Cerner Clinical Information System, MD design team, 2004.
4. MD Cerner Advisory Team, 2004.
5. Down Syndrome Clinic planning meetings, 2004.

6. Biodesign Planning Committee, 2000-2001.
7. Neuroscience faculty search committee, 2001.
8. IGERT grant planning committee, 2007.

**Technical Referee:**

## Movement Disorders and Dystonia

1. *Movement Disorders*
2. *J. Neurology, Neurosurgery, Psychiatry*
3. *J. Child Neurology*
4. *Pediatric Neurology*
5. *Neurology*
6. *Lancet Neurology*

## Movement Science and Biomechanics

1. *J. Motor Behavior*
2. *Exp. Brain Research*

## Computational Neuroscience and Neural Networks

1. *Neural Computation*
2. *Neural Networks*
3. *IEEE Transactions on Neural Networks*
4. *IEEE Transactions on Pattern Analysis and Machine Intelligence*
5. *Biological Cybernetics*
6. *Physics Review Letters*

## Neurophysiology and Neuroscience

1. *J. Neurophysiology*
2. *J. Neuroscience*
3. *Brain*
4. *J. Neuroscience Methods*
5. *Neurobiology of Disease*
6. *Brain and Cognition*
7. *Epilepsia*

**Primary Research Goal:** To use engineering methods and principles to understand developmental disorders of motor control.

**Major Research Areas:**

**Computational Neuroscience and Neural Networks:**

1. The mathematical description of dystonia and abnormal human movement
2. Mathematical models of abnormal basal ganglia function
3. Neural Network models of normal and disordered human motor learning
4. Neural Network control algorithms for robotics, and failure of control
5. Factors that enhance or prevent motor learning
6. Contribution of disordered sensory processing to dystonia
7. Information representation in neural population codes
8. Maximum-likelihood methods for interpreting bioelectric signals
9. Massively-parallel neural network models
10. Neural network simulation using a field programmable gate array (FPGA)

**Clinical Research in Childhood Movement Disorders:**

1. Tools for quantification and diagnosis of dystonia in children
2. Quantification of ataxia, apraxia, and deficits of selective motor control
3. Role of botulinum toxin in the modification of learned motor patterns
4. Effect of early treatment of dystonia on motor developmental outcome
5. Feedback retraining of multiple-muscle patterned movement
6. Virtual-reality environments for motor retraining
7. Optimization of assisted communication interfaces for children with motor disorders
8. Quantification of abnormal reflexes in dystonia
9. Near-infrared spectroscopy (NIRS) measurement of cortical activation
10. Theta-burst transcranial magnetic stimulation of motor cortex

**D. POST-DEGREE HONORS AND AWARDS**

**Honors And Awards**

**1995** McDonnell-Pew Postdoctoral Fellowship.

**1996-1998** von Meyer Travelling Fellowship.

**2000** Dystonia Medical Research Foundation New Millenium Award.

**2001** Pfizer Faculty Scholars Award.

**2003** United Cerebral Palsy Leaves of Hope Award.

**2003** William M. Hume Faculty Scholar Award.

**2004** Biodesign program teaching award.

**Selected Invited Papers and Addresses (30):**

1. "Failure of Motor Learning," invited lecture at MIT, May 2007, USC Dept. Biomedical Engineering October 2007, U. Washington February 2008.
2. "Pediatric Movement Disorders," invited lecture at the Movement Disorder Society, October 2006.
3. "New perspectives on pediatric dystonia", invited lecture, UCLA, March 2006, CHLA October 2007, U. Washington February 2008, USC Health Sciences March 2008.
4. "Diagnostic and Assessment measures of Ataxia-Telangiectasia", invited lecture at an NINDS-sponsored ataxia-telangiectasia clinical research workshop, March 2006.
5. "Movement disorders in degenerative and storage diseases", invited lecture at the Neurotrophic factors workshop of Children's Neurobiological Solutions, March 2006.
6. "Dystonia in children with cerebral palsy", invited lecture at the Rehabilitation Institute of Chicago, October 2005.
7. "Medication and Rehabilitation", invited lecture at the Dystonia Medical Research Foundation research meeting, September 2005.
8. "Dystonia, spasticity, and rigidity", invited lecture at U. Pittsburgh Medical Center, August 2005.
9. "Dystonia, spasticity, and rigidity", invited lecture at the Rehabilitation Institute of Chicago, August 2005.
10. "Dystonia, hypertonia, and co-contraction in children: It's not what we think", invited lecture at Northwestern University, August 2005.
11. "Pediatric Movement Disorders," invited lecturer at the Movement Disorder Society, March 2005.
12. "Movement disorders in cerebral palsy," invited lecturer at the American Academy of Neurology, April 2005.
13. "Failure of motor learning", invited lecture at the Redwood Neuroscience Institute, January 2005.
14. "US Taskforce on childhood motor disorders", invited lecture at the SPASM conference, Newcastle-on-Tyne, December 2004.
15. "Dystonia, spasticity, and rigidity - why are they important in cerebral palsy and how do we measure them?" course director and lecturer at the American Academy of Cerebral Palsy and Developmental Medicine, September 2004.
16. "New insights into the etiology of cerebral palsy", invited lecture at the American Academy of Pediatrics, October 2004.
17. "Tics, twitches, and Tourette syndrome", invited lecture at the American Academy of Pediatrics, October 2004.
18. "Acquired/Secondary movement disorders in childhood", invited lecture at the Movement Disorders Society, June 2004.
19. "Stiffness, spasticity, and dystonia: diagnosis and management of hypertonia in children", Brown University invited lecture, May 2004.

20. "Tools used to measure rigidity", invited lecture at the Kinetics Foundation, May 2004.
21. "New perspectives on pediatric dystonia", invited lecture at Oregon Health Sciences University, April 2004.
22. "Stiffness, spasticity, and dystonia: diagnosis and management of hypertonia in children", invited lecture at Oregon Health Sciences University, April 2004.
23. "Hypertonia in childhood," educational lecture at the American Academy of Neurology, April 2003.
24. "Botulinum toxin and the types of hypertonia", invited lecture at an Allergan-sponsored symposium on current uses of botulinum toxin, August 2003.
25. "Botulinum toxin type B", invited lecture at an Allergan-sponsored symposium on current uses of botulinum toxin, August 2003.
26. "Hypertonia in childhood," educational lecture at the Child Neurology Society, October 2002.
27. "Spasticity and other Hypertonias," World Congress on Disabilities, invited lecture, September 2002.
28. "Is pediatric dystonia a disorder of plasticity?" invited seminar at the Institute of Neurology and Gatsby Computational Sciences unit of the Queen Square Neurological Institute, December 2000.
29. "Interdisciplinary conference on childhood motor disorders", conference co-chairman and organizer, Toronto, September 2000.
30. "Neural Control of Movement", Satellite conference co-chairman and invited speaker, Key West, April 1999.

**Membership in Professional Associations:**

- 1992** American Society of Composers, Authors, and Publishers (ASCAP)
- 1993** Sigma Xi Engineering Society
- 1993** American Medical Association (AMA)
- 1995** American Academy of Pediatrics (AAP)
- 1995** Massachusetts Medical Association (MMA)
- 1995** American Association for the Advancement of Science (AAAS)
- 1995** Institute for Electrical and Electronics Engineers (IEEE)
- 1998** American Physiological Society (APS)
- 1999** Child Neurology Society (CNS)
- 1999** American Academy of Neurology (AAN)
- 2000** Movement Disorders Society (MDS)
- 2002** American Academy of Cerebral Palsy and Developmental Medicine (AACPDMD)
