Caregiver's

Longitudinal

Aging

Support

Program

What:

- Stanford University's Alzheimer Disease Research Center is looking for **caregivers** for individuals with a diagnosis of Alzheimer's Disease, Parkinson's Disease, Lewy Body Dementia or Mild Cognitive impairment to participate in a study that seeks to gain an understanding of how the caregiving changes over time and what factors are associated with those changes
- The study involves an interview where the caregiver will be asked about caregiving responsibilities, the caregiver's health, stress experienced, and emotional well-being.
- Participation will contribute to knowledge of how well-being changes over time, and can help to inform future interventions and scientific research.

Where:

- All interviews will be held at Stanford Health Care and Stanford University.

Commitment:

- Participation will involve interviews occurring once a year, for up to five years.
- If the caregiver qualifies, there may be other opportunities to participate in programs and workshops providing education and skills training for caregivers.
