Research & Practice Winter Lecture Series Planetary Health

Wildfires & Human Health

Dr. Kari Nadeau

Director, Sean N. Parker Center for Allergy and
Asthma Research

WEDNESDAY, FEB 20 | Y2E2 299 | 5:00PM

The unfortunate increase in wildfires in association with climate change has only augmented the impact of air pollution on health in many areas of the country.

Overall, wildfires have resulted in increased strokes, heart attacks, asthma attacks and respiratory disorders. Come hear about Dr Kari Nadeau's research here at Stanford, in which she investigates the impact of wildfires on health, focusing on the immune system and associated allergic disease.

Following the lecture at 6:00pm in the Y2E2 Faculty Lounge, the Program for Disease Ecology, Health, and the Environment will be hosting a **THINK 'n Drink** with Dr. Nadeau discussing "Monitoring & Protecting Human Health in a Changing California"
