MyOIT App Study

Study Objective:
The goal of this study is to evaluate the effectiveness of a mobile application in supporting oral immunotherapy (OIT) management. MyOIT is designed to assist users with daily dosing and symptom tracking in a simple and efficient way. Users can log their OIT doses and track their progress over time.

Who is Eligible:
Individuals currently undergoing oral immunotherapy (OIT) for a food allergen are eligible to participate. Participants must have access to an iPhone running iOS 17 or later and be at least 12 months of age.

Study Duration: 12 months

Study Principal Investigator: Dr. Sayantani Sindher
