Language Treatment Study for Children with Autism

Stanford researchers are currently recruiting children with Autism to identify brain imaging predictors of benefits from *Pivotal Response Treatment (PRT)* targeting language abilities

In order to participate in this research study your child must:

- *Be between the ages of 2 and 4 years old**
- *Be able to complete an MRI of the brain during natural sleep**
- *Participate in a 16-week parent training program**
- * Meet inclusion based on testing**

There is no cost to participate in the study.
