

September 26, 2019

The Division of Infectious Diseases and Geographic Medicine at Stanford University School of Medicine is recruiting for an **Antimicrobial Stewardship Fellow** for the academic 2020 – 2021 year.

This one-year, non-ACGME accredited fellowship provides rigorous specialized training in the implementation and expansion of an antimicrobial stewardship program, leadership and research experience. Other opportunities include formal training in quality improvement methodology and/or medical education and collaboration with state and international partners. Our program is a World Health Organization Collaborating Centre in Antimicrobial Stewardship and an IDSA ASP Center for Excellence. More details about our program can be found [here](#).

Eligible applicants would have completed at least two years of an ACGME-accredited ID fellowship program by the start of the fellowship and be either board certified or board eligible in infectious diseases, and board certified in internal medicine.

We encourage any interested fellows to apply for this unique training opportunity. Stanford is an equal opportunity employer and encourages applications from women and minorities.

To apply, please submit:

- A letter of intent
- A current curriculum vitae

Full application including letters of reference will be invited upon review. Interested candidates will be considered on a rolling basis.

We encourage candidates to reach out to us at IDWeek!

Please email application materials to:

Marisa Holubar, MD MS
Associate Medical Director, Stanford Antimicrobial Safety & Sustainability Program
