Study: Long-term follow-up of neurocognitive changes associated with breast cancer and chemotherapy

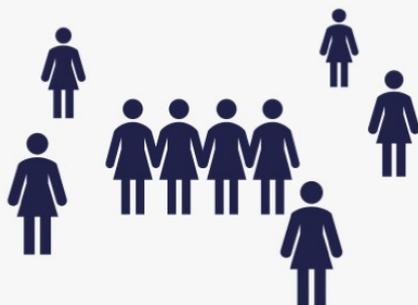

Researchers: Shelli Kesler, PhD; Oxana Palesh, PhD, MPH  
Stanford University, Stanford, CA  
The University of Texas at Austin, Austin, TX

## WE'RE STUDYING LONG-TERM EFFECTS OF CANCER ON THE BRAIN

YOU ARE PART OF A SPECIAL COHORT OF WOMEN

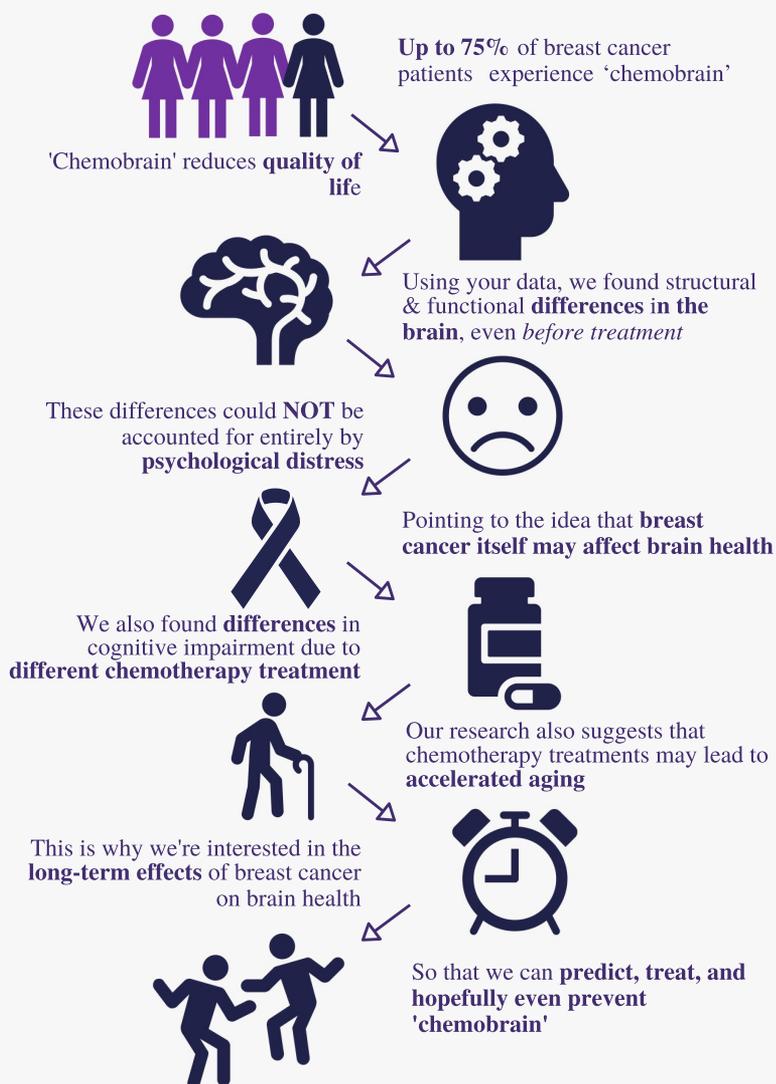

The National Cancer Institute has given us a 5-year grant renewal to investigate long-term changes of **brain health** due to **cancer** and **chemotherapy**.

You are part of a **unique cohort of women**, and you are among the **first in the world** who can give researchers insight into the long-term neurocognitive effects of cancer and chemotherapy.

Your participation has already lead to **break-throughs in research**, and your continued participation could lead to **additional innovative discoveries**.

## RESEARCH FINDINGS FROM THE STUDY YOU PARTICIPATED IN (& OTHERS LIKE IT)

# WHAT IS THE COMMITMENT?

WE WILL EVALUATE YOU ONCE A YEAR FOR FIVE YEARS

-This is a commitment of about 2.5 hours per year.

-We will bring you back for MRI scans and cognitive testing, similar to those you completed in the original study

-We will pay you \$50 per study visit, as a small thank-you for your time.

-Your participation could help us better understand how to treat or prevent chemobrain!

*"Cancer affects everyone, and it's up to all of us to support the important research that can one day make a much sought-after cure a reality."*

-Angie Harman
