

SUMMER RESEARCH PROGRAM

in Cardiovascular and Pulmonary Medicine

Paid 10-week program begins in June 2021

Diverse projects available in population-based, clinical, translational, and basic research.

Career development and enrichment activities

Execute an independent research project in the lab of a Stanford Medicine faculty member!

“This program has taught me so much and helped me realize that I am capable of doing research as well as applying to a very competitive program and getting accepted. This program has helped me with self-confidence, time management, and exposed me to topics that I would have never been aware of without the participation of this program. I will continue to keep in mind the trainings and educational sessions provided by this program such as imposter syndrome, the importance of bioethics, diversity and inclusion, and reproducibility within research. The CVI Undergraduate Summer Research Program has helped shape my curiosity and helped with my decision to continue forward with obtaining a higher education. That is something that I will always be thankful for to the program mentors, administrators, and overall CVI Program.

“The CVI Undergraduate Summer Research Program solidified my passions in wanting to pursue medicine and research. From getting to talk to visiting physician lecturers to working at an actual lab at Stanford, I was able to really get my feet wet with both the academic and clinical side of healthcare. Such experiences are super hard to come by, and I am grateful for the program for steering me in the right direction in regards to my future career goals and aspirations of a MD/PHD.

Deadline:
January 15, 2022
