Title: Data Studio Office Hour

Registration Form

<https://redcap.stanford.edu/surveys/?s=WMH74XCX33>

Summary

This week, Data Studio holds office hours for your data science needs. The Data Studio Office Hour brings together a series of biomedical investigators with a group of experts for brief individualized sessions to solicit advice about a statistical and study design issue that arises while planning or conducting a research project. Biomedical Data Science faculty are available to provide assistance with your research questions.

Data Studio provides consultations for research projects conducted at Stanford by investigators affiliated with the university and reviewed by the Research Compliance Office. If you need help with bioinformatics software and pipelines, check out the [Computational Services and Bioinformatics Facility](#) and the [Genetics Bioinformatics Service Center](#). Data Studio is not able to support research and development performed by an external entity.

Reserve a Data Studio Office Hour session by completing the [Registration Form](#). Sessions are 30 minutes long but might be extended at the discretion of the coordinator. If you register for a session, please be present at the start time on Wednesday.

If you are not able to register for a session, you are welcome to complete our Data Studio Consultation services form for a free one-hour meeting with one of our statisticians. You will find a link to the Consultation services form on our [Data Studio web page](#).
