Have you wondered what it is like to do quantitative public health research?

Are you interested in finding out how research can have a real impact on health?

**Program Goal**

To provide training and experience in population health research for college students who are from underrepresented and historically excluded groups in the health sciences.

**What you will learn**

This 8-week summer program will include coursework in public health and an internship doing quantitative population health research with a faculty mentor. These experiences will be augmented with career building and networking opportunities.

**Application**
