Accepting Applications for Advanced Pediatric IBD Fellowship
Fellowship Period: July 7, 2025 - July 6, 2026

The Stanford Medicine Children’s Health Center for Inflammatory Bowel Disease (IBD) and Celiac Disease is accepting applications for an Advanced Fellow in Pediatric IBD. The Stanford Pediatric Advanced IBD Fellowship is a non-ACGME, one-year program dedicated to developing expertise in IBD through multidisciplinary clinical training, education, and research. The Pediatric Advanced IBD Fellowship Training program will be offered to only one fellow a year. The advanced fellow will participate in IBD clinics, endoscopy, inpatient and outpatient consultations for patients with routine and complex IBD, point of care ultrasound and will also rotate through related subspecialty electives including the adult IBD center at Stanford. Teaching responsibilities will include case presentations, lectures to junior trainees, and journal club leadership. In addition, the fellow will spend 50% of their effort leading clinical or basic science research or QI project under the mentorship of chosen faculty members within and outside of our division.

Applicants must meet the following criteria:
1. Be in good standing in the medical community.
2. All applicants must obtain a California Medical License prior to the commencement of their training on July 7, 2025. Potential applicants should verify that their medical school is on the list of those recognized by the Medical Board of California prior to submitting an application.
3. Completed an ACGME-accredited pediatrics residency and pediatric gastroenterology fellowship.
4. To be accepted into our 1-year pediatric IBD fellowship program, an applicant must have a green card or be a U.S. citizen. At this time, we are unable to accept J1 or H1B visas.

The Center for IBD and Celiac Disease within the Division of Gastroenterology, Hepatology, and Nutrition provides interdisciplinary and state-of-the-art care to pediatric patients with IBD (including Crohn's disease, ulcerative colitis, IBD unclassified, lymphocytic colitis, and very early onset IBD). The Center is supported by a transformative philanthropic gift and is nationally recognized, seeing patients from all parts of California and surrounding regions. Faculty within the IBD Program include 6 IBD-focused gastroenterologists with clinical, translational, and basic research experience, pediatric surgeons, an integrative medicine gastroenterologist, and a psychologist. Allied health professionals within the program include an IBD dietician, social worker, pharmacist, nurses, a nurse practitioner, medical assistant, and administrative staff. Collectively, we provide holistic care for patients with the most complex IBD. We believe research is integral to advancing and leading the care of children with IBD. Investigators within the center lead or collaborate on research studies supported by NIH, the Crohn’s & Colitis Foundation, and other extramural funding sources. We collaborate with leading investigators across Stanford University in fields as diverse as microbiology, immunology, organoid biology, and engineering.

Candidates who are interested in this opportunity should submit an online application here. Letters of recommendation should be addressed to:

Alka Goyal, MD,
Director of the Pediatric Advanced IBD Fellowship Program Division of Gastroenterology, Hepatology, and Nutrition Department of Pediatrics
Stanford University School of Medicine
