SEMINAR SERIES**

Improving School Readiness: A Randomized Controlled Trial

Monday, January 13, 2020 | 12:00pm - 1:00pm

Munzer Auditorium, Beckman Center

279 Campus Drive, Stanford, CA, 94305

LISA CHAMBERLAIN, MD, MPH

Professor of Pediatrics (General Pediatrics)

Recipient of Arline and Pete Harman
Faculty Scholar Award (FY17 - FY20)

Pediatricians have unparalleled access to the most disenfranchised families and unparalleled trust of these same families. Pediatricians represent the only part of the early childhood “system” that can reach all children before kindergarten. Even the most disconnected families, for instance, those who economically struggle the most, those with food and housing insecurity, those who move often and are sometimes homeless, do bring their children to pediatric clinics. This provides an enormous opportunity to provide interventions to support child development. Pediatricians, however, lack scalable interventions that can assure school readiness. This talk will showcase the development of community-academic partnerships through population-level interventions designed to reduce the impact of child poverty on child wellbeing.

The seminars series is open to all, including faculty, staff, trainees, postdocs, and all members of the research community. Seats are limited, and reservation is required. Limited lunch will be provided on a first come, first served basis.
