## CAPE's Impact...

"...Having attended several CAPE simulation & debriefing workshops, I have experienced debriefing as the heart and soul of simulation-based training... CAPE's emphasis on a professional business-like approach to debriefing (very similar to the NASA & DOD models) with the major focus on individual actions and how these actions influence team performance, which in turn ultimately affects patient care, has been vital for me. It has helped me to create a culture of healthcare professionals who embrace a debriefing process that gives them an honest, business-like critique of their actions in direct relation to the patient's care... It just does not get any better than this. What I appreciate most about this process is that it is absolutely patient-centered..."

We SEE simulation differently: Safety. Efficiency. Effectiveness.
