Stanford Neurodiversity Summit 2022

How do you contribute to the Neurodiverse Community? Education, Service, Research, and/or Advocacy

October 23-25, 2022

VIRTUAL EXHIBIT PROSPECTUS
ABOUT US

The Stanford Center for Continuing Medical Education (SCCME) is a global leader in the promotion of lifelong learning among professionals in healthcare. As such, we advance patient and population health and promote innovation by planning and implementing accredited continuing education activities to enhance the professional development of healthcare teams both locally and regionally, in the San Francisco Bay area and in the greater Pacific Region, as well as nationally and globally.

To accomplish this mission, we apply evidence and best practices from the education and implementation sciences to develop, accredit, and evaluate activities and initiatives designed to improve the skills, strategy, and performance of providers and healthcare teams and the delivery of patient care, ultimately with the goal of creating better health outcomes. By aligning our activities with the relevant competency frameworks, we support our learners as faculty, healthcare professionals, and respective teams in providing high value care to their patients and the communities they serve.
The Stanford Neurodiversity Summit is a forum for exchange of ideas about neurodiversity among all people. It is a venue where we listen to each other, especially when our views are not the same. This active listening is not just about respect, but an act to grow together as a community.

At this forum, we will share visions, innovations, and inspirations about how neurodiversity can make our society better. Here is where neurodiverse/neurodivergent people, their family members and friends, educators, clinicians, researchers, and all other stakeholders and professionals learn from each other. Neurodiverse individuals will share their unique life and professional journeys, and some will share their significant contributions to the community. Other professionals and stakeholders will illustrate how their work enhances the lives of neurodiverse individuals.

This international course is intended for physicians, psychologist, social workers, residents, fellows, medical students that specialize in psychiatry & behavioral sciences. Dr. Lawrence Fung, Assistant Professor in Psychiatry at Stanford University, Director, Adult Neurodevelopment Clinic; Staff Psychiatrist, Autism & Developmental Disabilities Clinic will serve as the Course Director.

At the conclusion of this activity, learners will be able to:
1. Articulate the factors common to neurodiversity and intersectionality.
2. Identify the impact of systemic/societal bias related to communication and identity on neurodivergent individuals.
3. Describe at least three possible risk factors of suicidal thoughts and behaviors in autistic people.
4. Discuss at least four communication differences in autistic people.
5. Identify at least two crisis supports and resources for the autism community.
