New Proposed MSTP-Neurosciences Curriculum Requirements (4/13/20)

Core Courses
- SIN Bootcamp
- Pick 3 out of the available 8 core neuroscience courses. At least one core course has to come from each of pre-assigned Sections.

Section 1: Systems, Cellular, Computational, Cognitive
Section 2: Molecular, Development, Genetics, Anatomy

Electives
- 1 advanced elective course (3 units)
- Statistics Course approved by the program
- Responsible Conduct of Research

Journal Club
- MSTP students will take 3 quarters of journal club (this provides flexibility on when to take those courses so that it doesn’t conflict with Q6)

Additional Notes:
- If students want to take more courses for their own knowledge/skill improvement, they are definitely allowed to do so.
- These course requirements will be retroactive and will apply to current students.
- Students should talk with their PI and/or the Neuroscience Curriculum Director (currently Lisa) or the Neurosciences Program Director (Nirao) for advice about which 3 core courses best complement their training.
