

# Do you have Parkinson's Disease or another form or parkinsonism?

If you are 60 years or older, this research study may be for you!

## Did you know?

1 in 10 Parkinson's patients will have a fracture this year. If you've had a fall, your risk of fracture may be even higher.

## Help us find a solution.

The TOPAZ study will test if a medicine called zoledronate can prevent fractures and decrease risk of dying in people with Parkinson's Disease or other forms of parkinsonism.

## You can join if you:

- Are 60 years or older
- Have not had a hip fracture
- Have Parkinson's disease or another form of parkinsonism (including progressive supranuclear palsy, multiple system atrophy, cortical basal degeneration, vascular parkinsonism, dementia with Lewy bodies or another form of neurodegenerative parkinsonism)
