

## Rotation Summary: Hepatology/Liver Transplantation

### Rotation Contacts and Scheduling Details

<b>Rotation Director:</b>	Missy Hurwitz, MD <a href="mailto:mhurwitz@stanford.edu">mhurwitz@stanford.edu</a>
<b>Rotation Coordinator:</b>	Megan Christofferson <a href="mailto:MChristofferson@stanfordchildrens.org">MChristofferson@stanfordchildrens.org</a> (650) 725-9813
<b>GI/Hepatology Office:</b>	750 Welch, Suite 116
<b>Positions Available:</b>	1 resident per 2-week block
<b>Months Rotation Offered:</b>	Every Block

### Introduction

The elective rotation in hepatology/liver transplantation will provide residents with a breadth of experience in caring for patients with liver dysfunction.

The rotation will equip residents with the tools to evaluate a patient with hepatic dysfunction, understand the overall workup including laboratory studies, review of pathology, and various imaging modalities. Additionally, residents will be able to recognize when to refer for transplant evaluation. These skills should be relevant and valuable to the resident and are applicable to careers spanning from general pediatrics to gastroenterology and transplant hepatology. Residents will develop these skills through various clinical opportunities including hepatology clinic, liver transplant clinic, inpatient rounds with the medical and/or surgical hepatology teams, inpatient consults, hepatology-specific radiology conference, pathology rounds, liver selection meeting, and observing liver transplants and/or biopsies in the OR/Interventional radiology. There are also opportunities for educational sessions with hepatology attendings. Working with the rotation director, the curriculum can be tailored to the resident's specific interests.

### Resident Roles and Responsibilities

Rotation residents, in conjunction with the rotation director, will have the opportunity to tailor the rotation to their specific interests. Residents should expect to attend hepatology and liver transplant clinics, as well as attend inpatient rounds and consults. Attendance is also expected at hepatology specific conferences (radiology, pathology, liver selection). Residents should complete evaluations of the rotation
