Population Health Sciences
Office of Community Health

*Transforming engagement to impact community health*

Lisa Goldman Rosas, PhD MPH
Assistant Scientist
Palo Alto Medical Foundation Research Institute
Instructor of Medicine
Stanford Prevention Research Center
The Office of Community Health wants to support you in:

- Harnessing the rich resources in our institution and community to **catalyze** discovery in community health
- **Disrupting** existing community engagement models
- Inspiring **innovation** to create new approaches that have never been tried before

Challenging the field to **effectively** impact population health and promote health equity
Community Health Hub

Designing & funding of innovative community-based research:
- Identify, enhance, support, & coordinate multi-sectoral partnerships
- Design community/stakeholder engagement efforts
- Writing grant sections, letters of support

Successfully implement studies in complex real-world settings:
- Human capital in key areas of expertise for implementation (e.g., recruitment)
- Ongoing evaluation & improvement of engagement efforts
- Identification & design of training to promote transformative research

None of us is as smart as all of us

Effectively disseminate and implement findings:
- Design of pragmatic approaches to promote rapid dissemination
- Expertise in mixed research methods
- Systematic evaluation of potential for implementation and dissemination
**Community health partnership roundtable:** Relationships where learning is a reciprocal process, working toward the shared goal of improving the overall health of populations

**Support new ideas**

**Community engagement & innovative technologies:**
Wearable devices & mobile applications that promote scientific discovery & testing, ecological momentary assessment to gather real-time information, virtual reality to simulate future possibilities

**Implementation labs:**
Accelerate the research cycle through rapid testing in real-world settings and refinement with community input
Population Health Sciences
Office of Community Health

*Putting the pieces together to enhance population health*

- Multi-sectoral  
- Multi-level  
- Multi-generational

- **Seamless coordination** of community health efforts for the benefit of community members, organizations, and science
- **Tools** for community health research available to researchers and community
- **Resources** for engaging researchers/communities in the design, funding, implementation and dissemination phases
- **Human capital** in key areas of expertise at Stanford and in community
- **Training** for researchers, clinicians, communities, etc.
- **Strategic planning** based on clearly defined goals, transparent measurement of progress, and commitment to continuous improvement
