FULBRIGHT GLOBAL SCHOLARS CHILD PSYCHIATRY MENTORSHIP NETWORK

Every child deserves an equal opportunity at good health and a happy life yet 10-20% of children experience mental illness. Even in high income countries we do not have enough psychiatrists to provide adequate care.

The Fulbright Child Psychiatry Mentorship Network is an international collaborative mentorship network for medical students interested in child and adolescent psychiatry with the ultimate goal of expanding global access to mental health care. Together we share knowledge across borders and create new opportunities and connections in child psychiatry across the globe.
