| :--- | :--- |

| Procedure | Y-Maze Spontaneous Alternation |
| :---: | :---: |

Y-Maze Spontaneus Alternation
The Y -Maze is a test for spontaneous alternation in rodents. Spontaneous alternations is a behavioral test for measuring exploratory behavior. This test is based on the willingness of rodents to explore a new environment. Normal rodents will prefer to experience a different arm of the maze than the one they visited on their previous entry. Many parts of the brain including: hippocampus, septum, basal forebrain, and prefrontal cortex are involved in this task.

Two different Y-Maze apparatuses are available to measure the Spontaneous Alternation The large $Y$-Maze has 3 equal arms of 40 cm length, 8 cm width, and 15 cm height, attached at 120 degree angles. The small Y-Maze has 2 equal arms and 1 differing arm separated by 120 degree angles. The 2 equal arms have a dimension of 15.24 cm length, 12.7 cm height, and 7.62 cm width; the 1 longer arm has dimensions of 20.32 cm length 12.7 cm height, and 7.62 cm width. The small Y-Maze was used for this report.

Each arm of the maze is labeled as either arm A, B, or C. In each session, the animal is placed in arm B and allowed to explore the three arms for 5 minutes. Number of arm entries and number of alternations are scored live in order to calculate the percent alternation. The entry is considered when all four limbs are within the arm. The alternation percentage is calculated by dividing the number of alternations by number of possible triads $\times 100$. The maze is cleaned with Virkon solution between animals to eliminate odor traces.

Small Y-Maze Data

| ID\# | Genotype | Total Entries | \# of Alternations | \# of possible Triads | \% Alternation |
| :---: | :---: | :---: | :---: | :---: | :---: |
| 1 | WT | 21 | 12 | 19 | 63.15789474 |
| 2 | WT | 29 | 17 | 27 | 62.96296296 |
| 3 | WT | 29 | 17 | 27 | 62.96296296 |
| 4 | WT | 34 | 21 | 32 | 65.625 |
| 5 | WT | 21 | 11 | 19 | 57.89473684 |
| 6 | WT | 22 | 11 | 20 | 55 |
| 7 | WT | 19 | 15 | 17 | 88.23529412 |
| 8 | WT | 20 | 10 | 18 | 55.55555556 |
| 9 | WT | 25 | 17 | 23 | 73.91304348 |
| 10 | WT | 25 | 16 | 23 | 69.56521739 |
| 11 | WT | 43 | 22 | 41 | 53.65853659 |
| 12 | WT | 24 | 13 | 22 | 59.09090909 |
| 13 | WT | 48 | 21 | 46 | 45.65217391 |
| 14 | WT | 20 | 13 | 18 | 72.2222222 |
| 15 | WT | 25 | 12 | 23 | 52.17391304 |
| 16 | T41B | 24 | 13 | 22 | 59.09090909 |
| 17 | T41B | 24 | 9 | 22 | 40.90909091 |
| 18 | T41B | 31 | 17 | 29 | 58.62068966 |
| 19 | T41B | 18 | 7 | 16 | 43.75 |
| 20 | T41B | 24 | 14 | 22 | 63.63636364 |
| 21 | T41B | 14 | 7 | 12 | 58.33333333 |
| 22 | T41B | 27 | 14 | 25 | 56 |
| 23 | T41B | 32 | 17 | 30 | 56.66666667 |
| 24 | T41B | 18 | 4 | 16 | 25 |
| 25 | T41B | 28 | 18 | 26 | 69.23076923 |
| 26 | T41B | 42 | 23 | 40 | 57.5 |
| 27 | T41B | 28 | 11 | 26 | 42.30769231 |
| 28 | T41B | 19 | 9 | 17 | 52.94117647 |

The percent alternation was analyzed using a one sample t-test to compare each group's percent alternation to a theoretical value of $50 \%$. WT mice alternated at levels that were significantly above chance (50\%), which Tg mice did not alternated at levels significantly above chance.

Stanford Behavioral and Functional Neuroscience Lab

## Conclusions

T41B Tg mice did not alternate at levels significantly above chance ( $50 \%$ ) while their WT littermates did. This deficit suggests that T41B Tg mice have impaired spatial working memory.
