

# WINTER 2023 IMMUNOLOGY SEMINAR SERIES

Tuesdays at 4:30-5:30 PM PT in LKSC LK130

January 9

**Abby Overacre, PhD**

University of Pittsburgh  
*Dietary and microbial factors controlling anti-tumor immunity*

January 16

**Aaron Ring, MD, PhD**

Fred Hutch  
*Autoantibodies as alleles*

January 23

**Marc Jenkins, PhD**

University of Minnesota  
*Helper T cell subset diversification for cellular and humoral immune responses*

January 30

**Daniel Mucida, PhD**

The Rockefeller University  
*Neuro-Immune interactions in the gut*

February 6

**Daquina Nicholas, PhD**

UC Irvine  
*Why recognize protein when fats taste so good*

February 13

**Nik Joshi, PhD**

Yale University  
*Investigating T cell immunobiology using genetically engineered models*

February 20

**Stephen Waggoner, PhD**

University of Cincinnati  
*Re-making a murderer: non-canonical contributions of natural killer cells to immunity and disease*

February 27

**Stefani Spranger, PhD**

MIT  
*Not all T cell responses are equal: tissue-site matters*

March 5

**Julie Overbaugh, PhD**

Fred Hutch  
*Identification of novel host cell restriction factors that impact HIV replication in CD4+T cells*

March 12

**Michael Birnbaum, PhD**

MIT  
*TBD*
