You aren’t expected to know every word we go over today, but **here are three critical words** for today. Test your knowledge of vaping words and phrases by clicking and dragging the correct words to their description. This will help before continuing on with the course.

Drag the words into the correct boxes:

- **Nicotine**
- **Aerosol**
- **Salt-based Nicotine**

- a mixture of chemicals that create a cloud, which leaves behind chemicals in the air and on things (ex. furniture and clothes).
- a toxic chemical made by tobacco plants to stop bugs or predators from eating or damaging the plant, and the same chemical the tobacco/nicotine industry uses to addict their consumers.
- a chemical found in e-cigarette products like JUUL and Puff bar, known for decreasing the throat irritation from breathing in smoke or aerosol from a nicotine product.

Check your answers and receive feedback.
E-Cigarettes Chemicals

Welcome to the end of the second part of the course. You will now answer questions related to what you learned. You can redo questions you answer incorrectly. Other free-response questions will be graded later, but remember to answer them completely and thoughtfully. Thank you!

After reviewing feedback, the student can redo the quiz

A JUUL pod can have up to a total of ___ chemicals in it.

Incorrect
Actually, a independent lab looked at the chemicals in a JUUL pod and counted more than what the JUUL website says.

A pet living with someone using an e-cigarette may be exposed to harmful chemicals from thirdhand aerosol by coming in contact with:

- The walls in the house or apartment
- The carpet on the floor
- The furniture in the house or apartment
- All of the above

Incorrect
Chemicals from an aerosol are able to diffuse or spread out.
