

# Basic List

The Basic List creates a dynamic list of pages based on different sourcing methods. Depending on the source method used, the list can organically update as pages are created or changed.

## Features

- Multiple sourcing options
- Sorting and display choices
- Pagination controls
- Display pages hidden from navigation

*Create a customized, dynamic list of pages from a variety of sources*

## Pro Tips

- Create a dynamic links list using site child pages, useful if site navigation goes below 3 levels
- Create links based on tags, useful to direct to specifically categorized pages
- Use a fixed list to link to both internal and external sites in one list

# Basic List Legend

## i. Page | Folder

Choose a specific directory or page. Best for the **highest level of specificity.**

## ii. Search

Keyword(s) query created by the Help Desk. **Highest level of customization.**

## iii. Tags

Select from a list of tags. **Broadest range of inclusion.**
