

Carousel

Create rotating slides for presenting and consolidating content

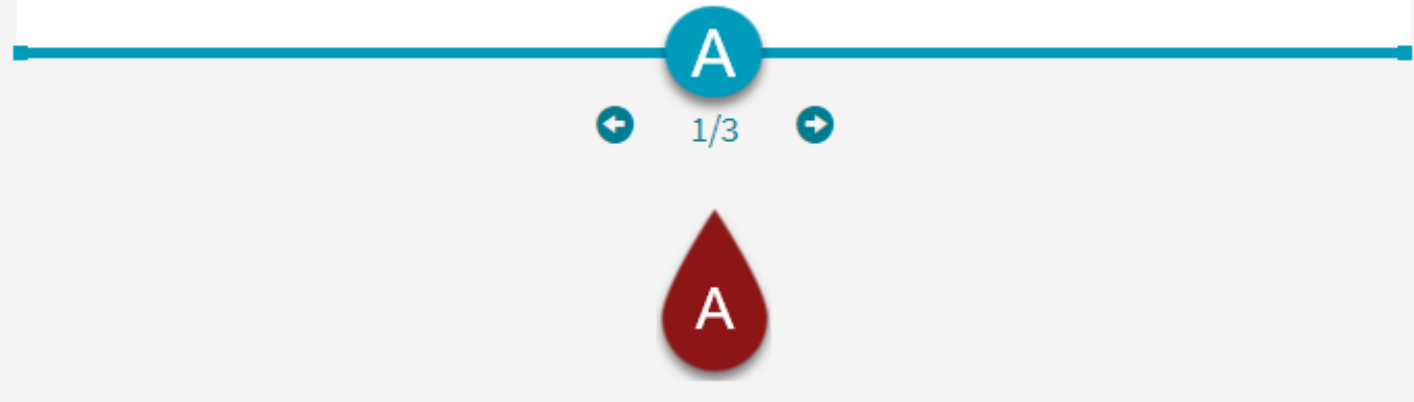

Carousels provide an attractive alternate to consolidate content. Similar to a Banner Builder, but without the dependency on images, you can use the Carousel to engage visitors by placing content across multiple slides and having the content rotate into view.

Features

- Add slides to create new component zones
- Attractive, creative presentation
- Auto rotation and speed settings

(A) Slide 1 Content

This is a live example of a carousel. Any components other than state-changing types (accordion, tabs, flip panels) may be inserted. The component used here is a Color Block List.

Pro Tips

- Good for automated presentation of highlights
- Do not place Tabs or Accordions within Carousels
- Do not use multiple Carousels on a page
- Switch between slides using Preview mode
