

Clinical Trials

The Clinical Trials List imports and synchronizes with Stanford Medicine clinical trials that you specify. Display a single trial, list, or a count widget.

Features

- Multiple views including summary, tabular, or compact
- Build Lists using a wide variety of source criteria
- Advanced search option
- Details expand on current, or separate custom page
- Paging, archive and counter options

Display Stanford Clinical Trials on your pages

The screenshot shows a web interface for displaying Stanford Clinical Trials. It features a search bar on the right and a list of trial results on the left. Callout letters A-F point to specific elements: A points to the search bar, B points to the pagination controls at the bottom, C points to a lock icon indicating a trial is not accepting patients, D points to a custom heading, E points to a 'Showing 1 - 3 of 11 trials' indicator, and F points to the top navigation bar. The first trial listed is 'Zenith(R) Low Profile AAA Endovascular Graft Clinical Study', and the second is 'Study of the Effectiveness of Telmisartan in Slowing the Progression of Abdominal Aortic Aneurysms'. Both trials include a 'View Details' link and a 'More' link. The search bar on the right includes a 'Keyword' field, a 'Condition' dropdown menu, and a checkbox for 'Accepting new patients'.

Pro Tips

- Use a separate "Details Page" option when there's multiple listings on a page
- Does not display trials from sites outside Stanford
- Create specific lists using Trial or Investigator IDs
- Create broader lists using keywords or conditions

Details Page Option

The default behavior when users click an entry is to expand and show all details on the current page, temporarily removing all other listings. This works fine when there's only a few entries per page, but not ideal when there are many. To display details on a separate, uncluttered page, link the **results page (B)** option to a new page, setup as below:

1. Create a new child page under the current trials page.
2. Add a Clinical Trials component to the page and edit it. Configure field **(A) Locate trials by** to **Display trial details**.
3. (Optional) Add a [Button component](#) at the top of the page. Link this button to return to the trials page.
