

Reference

The Reference component is the ideal tool for leveraging repeatable content on your website. Functioning in a one-to-many fashion, target the content source and place the Reference on as many pages as you like, without having to retype the content.

Features

- Content reuse
- Content highlight

Replicate a single content source across multiple pages

Pro Tips

- Useful for repeated information (e.g. aux nav., contact info)
- May take experimentation to target correct content as one must dig into Panel Builders
- Can only reference internal content you have access to
