

Text & Image

The Text & Image component streamlines the authoring experience. What would take at least 3 separate components to reproduce, Text & Image does in one swoop by combining words, imagery and links into a single package.

Display text, image and headings in a horizontally aligned package

Features

- Image alignment and sizing options
- Full text editor
- Icons or imagery
- Full-screen image toggle

Pro Tips

- Spans to fit column – ideal for medium-large widths
- Use icons in lieu of images, or none at all
- Create content highlights or 'funnels' using headings and links
- Transparent background. Use with Panel Builders to define borders.

ADD PHOTO TITLE*

image title

Add a short description to meet accessibility requirements. This field is

Required.

B

Add Image link URL

IMAGE LINK URL

/content/sm/McKinley Sandbox

Open link in new window?

TEXT

(H3) Optional, but Recommended Heading

This is example text for the Text & Image component. The text editor is fully featured and you can add as much text as you like, however it will not wrap around the image. If you would like to wrap text around an image, use the [Image component](#) instead.
