

School of Medicine Lecture Videos 2009-2010

Quicktime Format

EdTech's course videos will be delivered to students in downloadable Quicktime (.mov) file format. Download the free Quicktime Player here:
<http://www.apple.com/quicktime>

Higher Resolution

Based upon student survey feedback, videos will be captured at higher resolution this year and download size will be close to 200 MB per hour of video.

Free Multi-Speed Play

The free Quicktime player allows for playback speed up to 3x. Students report that audio quality diminishes above 1.5x but Apple is working to improve this function. To access this feature, open Quicktime and go to Window -> Show A/V Controls and adjust the Playback Speed slider. You may get better results by also adjusting Pitch Shift.

Dynamic Content Pages

Lecture content will appear by the end of the day inside the new dynamic content pages. In CourseWork, click the Lecture Media link on the left navigation. Use Firefox and make sure "Accept Cookies" and "Accept Third Party Cookies" are checked.

Play a Video on iPod/iPhone

Download a video, then open iTunes and "File/Add To Library", then right-click (control+click) on the file in iTunes and "Create iPod or iPhone Version". It will now sync with your mobile device.
