Although there is still no proven treatment for Alzheimer’s disease (AD), methods have been developed to identify those who are at risk of developing AD at early stage to allow for early intervention. Dr. Cheng will discuss the diagnosis of preclinical AD, new treatments, and promising study results.

Joseph Cheng, M.D., Ph.D. is a staff neurologist at VA Palo Alto, and Clinical Associate Professor (Affiliated) in the Department of Psychiatry and Behavioral Sciences at Stanford University. Dr. Cheng is also the Co-Director of the Stanford/VA Alzheimer’s Center. His research focuses on the effects of brain stimulation on cognition and how to use brain stimulation to prevent or delay the onset of Alzheimer’s disease.
