Pregnenolone Treatment Trial for Individuals with Autism

Stanford University researchers are recruiting individuals with autism to participate in a research study to examine the effects of Pregnenolone, a steroid hormone treatment, on irritability.

Participants must:

- Be diagnosed with an Autism Spectrum Disorder
- Be between the ages of 14 and 21 years
- Be willing to take Pregnenolone for at least 14 weeks and provide blood samples
- Be willing to participate in behavioral and cognitive testing
- Have no serious medical problems
